LIST OF TABLES

Table 4.1: Represent Coefficient of Correlation between the variables of the study

Table 4.2: Represent the Hierarchical Multiple Regression analysis for the Dependent variable Psychological well-being among adolescents.

Table 4.3: Represent the Hierarchical Multiple Regression analysis for the Dependent variable Autonomy (dimension of Psychological well-being) among adolescents.

Table 4.4: Represent the Hierarchical Multiple Regression analysis for the Dependent variable Environmental mastery (dimension of Psychological well-being) among adolescents.

Table 4.5: Represent the Hierarchical Multiple Regression analysis for the Dependent variable Personal Growth (dimension of Psychological well-being) among adolescents.

Table 4.6: Represent the Hierarchical Multiple Regression analysis for the Dependent variable Positive relation with others (dimension of Psychological well-being) among adolescents.

Table 4.7: Represent the Hierarchical Multiple Regression analysis for the Dependent variable Purpose in life (dimension of Psychological well-being) among adolescents.

Table 4.8: Represent the Hierarchical Multiple Regression analysis for the Dependent variable Self-acceptance (dimension of Psychological well-being) among adolescents.

Table 4.9: Showing the moderating effect of Emotional intelligence on the relationship between stress and Psychological well-being (total).

Table 4.10: Showing the moderating effect of Perceive & understand (Dimension of Emotional intelligence) on the relationship between stress and Autonomy and Environmental mastery (Dimension of Psychological well-being)

Table 4.11: Showing the moderating effect of Perceive and understand (Dimension of Emotional intelligence) on the relationship between Stress and Personal growth and Positive relation with others (Dimension of Psychological well-being)

Table 4.12: Showing the moderating effect of Perceive & understand (Dimension of Emotional intelligence) on the relationship between stress and Purpose in life and Self-acceptance (Dimension of Psychological well-being)
Table 4.13: Showing the moderating effect of Express & label (Dimension of Emotional intelligence) on the relationship between stress and Autonomy and Environmental mastery (Dimension of Psychological well-being)

Table 4.14: Showing the moderating effect of Express & label (Dimension of Emotional intelligence) on the relationship between stress and Personal growth and Positive relation with others (Dimension of Psychological well-being)

Table 4.15: Showing the moderating effect of Express & label (Dimension of Emotional intelligence) on the relationship between stress and Purpose in life and Self-acceptance (Dimension of Psychological well-being)

Table 4.16: Showing the moderating effect of Manage and Regulate (Emotional intelligence) on the relationship between Stress and Autonomy and Environmental mastery (Dimension of Psychological well-being)

Table 4.17: Showing the moderating effect of Manage & regulate (Dimension of emotional intelligence) on the relationship between stress and dimensions of Personal growth and Positive relation with others (Dimension of Psychological well-being)

Table 4.18: Showing the moderating effect of Manage and regulate (Dimension of Emotional intelligence) on the relationship between Stress and Purpose in life and Self-acceptance (Dimension of Psychological well-being)

Table 4.19: Showing the moderating effect of Self-efficacy on the relationship between Stress and Psychological well-being (total).

Table 4.20: Showing the moderating effect of Self-efficacy on the relationship between Stress and Autonomy and Environmental mastery (Dimension of Psychological well-being)

Table 4.21: Showing the moderating effect of Self-efficacy on the relationship between Stress and (Personal growth and Positive relation with others (Dimension of Psychological well-being)

Table 4.22: Showing the moderating effect of Self-efficacy on the relationship between Stress and Purpose in life and Self-Acceptance (Dimension of Psychological well-being)

Table 4.23: Represent the gender differences in all the variables
