ACKNOWLEDGEMENTS

All praise to Almighty Allah, the Creator, Cherisher and Sustainer of the worlds. He created Man and "taught him that which he knew not" (Al-Quran). He is Most Gracious and Most Merciful to all His creations. His bounties and mercies on me and all my fellow human beings are innumerable. He alone endowed me with the requisite knowledge and ability to produce this piece of research work. I bow down to him in gratitude with all humility from the depth of my soul.

I also thank my Lord for giving me parents whose love, sacrifices and sustained efforts enabled me to acquire knowledge which, together with the religious and moral training I received from them, made me understand the meaning and essence of life, comprehend its real purpose and destination, and cherish its nobler and higher values. In fact, whatever I am today, it is because of their prayers, loving care and sincere endeavours. I cannot give them anything in return except a heart full of love, affection and deep reverence for them.

The present age is characterised by a virtual 'explosion of knowledge'. Knowledge has been growing in our times at a vertiginous speed, unprecedented in human history. According to a conservative estimate, the sum total of knowledge now doubles at the turn of every decade. The tremendous advances in all the domains of human knowledge are the result of a highly accelerated pace of research, facilitated by easy accessibility to earlier research literature through the means of modern information networks, indexing and abstracting services in every discipline and the present-day cooperative trend in research at all levels—local, national, regional and international. In the context of this scenario in the universe of knowledge, every new investigation is closely related to earlier probes and enquiries, in one way or the other, and forms a link in the unbroken chain of researches in a particular area of knowledge. The present humble research study is no exception in this behalf. I
have benefitted greatly from the investigations and researches of my predecessors in the area of health maintenance behavior. I owe a debt of gratitude to all of them. The list of references at the end of the thesis gives the names of all such authors and researchers together with bibliographical details of their works and studies.

I do not find appropriate words to express my deep sense of gratitude to Dr. (Mrs.) Asiya Aijaz under whose supervision this research was undertaken. Keenly interested in the successful completion of my work, she helped me effectively during the course of the study through her expert guidance, valuable counselling and critical suggestions. The discussions I had with her, off and on, enlightened me considerably about the ramifications of the study. In fact, her sincere cooperation, sympathetic and inspiring attitude, and timely assistance greatly facilitated the accomplishment of this research work.

It is no exaggeration that this study owes its existence to the inspiration and encouragement that I received from Prof. Saeeduzzafar, Chairman, Deptt. of Psychology. I was fortunate enough in receiving immense help from a doyen of his eminence in conducting this investigation. He was kind enough to give me the liberty to encroach upon his precious time despite his numerous academic and administrative preoccupations. My frequent discussions with him gave me a deeper insight into the issues involved in the study. His invaluable suggestions and penetrating comments helped me a lot in improving the quality of this research work. The formal words and phrases of gratefulness are too inadequate to express my real sentiments; my heart overflows with gratitude for him.

I feel profoundly beholden to my respected teacher, Prof. Shamim Ahmad Ansari, who not only guided me in designing the study but also allowed me to have the benefits of his erudition and academic maturity in many other ways. He very kindly took personal interest in my work, kept an eye over its progress and gave me very constructive suggestions and highly sound academic
advice from time to time. All this inevitably made a great impact on raising the standard of this enquiry.

I am also highly grateful to all my teachers and colleagues in the Department for their encouragement, cooperation and valuable help during the course of this study. Whatever help I sought from them, it was unhesitatingly extended to me.

I would like to express my sincere thanks specially to my senior colleagues, namely, Dr. Zaki, Dr. Nasir, Dr. Shaukat and Dr. Nasheed who helped me in the statistical analysis of data. Their assistance was really very conducive to my work.

I owe a special debt of gratitude to my in-laws for their whole hearted cooperation during the course of this research work. I am particularly grateful to my father-in-law, Mufti Abdul Khaliq Saheb, an erudite scholar of Islamic theology, who infact motivated me to pursue research in my area of study. He infused in me the true Islamic spirit of keeping oneself apace the wave-front of knowledge and making one's own contribution to its expanding horizon. Despite his prolonged illness and subsequent bypass heart-surgery he exhorted me to continue my work undisturbed. Likewise, my mother-in-law, Mrs. Rashida Mufti, a graduate from Aligarh representing the best in Islamic culture with modern outlook of life, relieved me completely of my domestic responsibilities to enable me to continue my work single mindedly. My two sisters-in-law, Fauzi and Rafia, were equally helpful to me and assisted me in the collection of data.

I do not know how to thank my husband, Dr. Salik Ahmad Siddiqui, who was my main source of strength and energy, vigour and vitality, during this long period of four years. He shared with me all the pains and strains of my work. It was really he who sustained my full time engagement in research work. taking upon himself almost my entire domestic responsibilities. He also
extended whatever academic help I sought from him for conducting this
research study.

Thanks flow out from the depth of my heart for my elder brother,
Dr. Moinuddin, Lecturer in Biochemistry in the J. N. Medical College, his
wife, Mrs. Safia Moinuddin, a Ph.D. scholar in Biochemistry and my younger
sister, Miss Tayyaba Ishrat, who is also pursuing research for her Ph.D.
degree in Psychology at this university. I very much banked on their love and
affection, prompt and extensive help, deep and sincere interest in my work. Dr.
Moinuddin went through the typed script of the thesis and did for me the
arduous job of proof reading. He also arranged for its exquisite binding and all
that was necessary for the fine get-up of the work in bound form. Tayyaba and
Safia helped me greatly in the collection and tabulation of data. They also gave
me useful suggestions from time to time.

Last but not the least, I am thankful to Mr. Mohd. Shahid Siddiqui for
the computerised typing of the thesis. He did this job very nicely and
meticulously.

Shaheena Ishrat
