This is perhaps the easiest and hardest part that I have to write in my thesis. It will be simple to name all the people who have helped to get this done, but will be tough to thank them enough.

Firstly, I would like to express my heartfelt and sincere gratitude to my guide and mentor, Prof. Dileep Deobagkar, for giving me the opportunity to carry out my Ph.D. It is said that the first supervisor in scientific career has the most lasting influence. In this case, that is a cheering thought. I have learned so much from him for how to do good science. I can only hope to carry with me the lessons that he taught me, the elaboration of scientific thinking and the dedication to a cause. He has been a brilliant guide and showed endless energy to answer any smallquires that I came up with.

I wish to express my gratitude to Prof. Deepti Deobagkar for her competent guidance, supervision and intelligent attention to my work. I always felt comfortable going to her if an experiment wasn’t working, and knew she could help me figure out something else to try. The discussion session with her were very informative and helped me a lot in thinking clearly about my work. I thank her for keeping me motivated, and inspiring me to do my best.

I express my sincere thanks and gratitude to my co-guide Dr. S.K. Apte, BARC, Mumbai, for his guidance, encouragement, and enormous help through put my Ph.D. His ideas and logical way of thinking and analysis helped me tremendously right throughout my work. I am thankful to him for his timely suggestions, corrections and valuable comments during my work and thesis writing.

I sincerely thank the Head, Department of Zoology, Prof. S.S.Ghaskadbi for providing help when ever required. Deepest gratitude is also due to my committee members Prof. W.N. Gade, Prof. S.S. Ghaskadbi and Dr. B.B. Nath, for their valuable comments and suggestions which were of great help for my work. I also thank the teaching and non teaching staff of Department of Zoology.

I thank my seniors, Aarti, Bhaskar and Ketaki, for being of great help in the initial period of my Ph.D. My work would not have been completed without the tremendous
help and support of my labmates Anita, Ashwin, Chitra, Gauri, Mandar, Sanjay, Shruti, Sumeeta, Sonali and Swati for many valuable discussions that have aided me in the completion of this work, each of them in one way or the other have made my work a pleasure. Thanks are also required for Ishita, Vinay and Shriram who have helped me during thesis writing as well as a wonderful work environment, their encouragement, and most of all for their friendship. Words are inadequate in offering thanks to Mandar and Chitra for their encouragement and cooperation. They have been a source of real inspiration and pillar of support throughout my Ph.D tenure. Special thanks to Chitra not only for helping me in the lab, during dissertation but also for being an excellent listener and a good friend.

I would like to thank Rohit Kadam, who has been of help at the oddest of hours, by providing the various glassware and other equipments, as and when I required them.

I am thankful to all my lab mates and seniors at BARC, specially Bhakti, Deepti and Chitra for helping me in carrying out my experiments.

Finally, I would like to thank my family for their love, support, motivation and trust in me. They have been a pillar of support in all good and bad times. I would like to take this opportunity to thank my mother: for encouragement, understanding, support, and endless love for so many years. She has been always there for me.

It gives me utmost pleasure to thank my dear husband, Atul. He has always been besides me during my scientific ups and down. He deserves special thanks for the encouragement, most of all for refreshing moments outside work and his realistic attitude towards my temperament.

During my tenure of research, I have been a recipient of Junior Research Fellowship and Senior Research Fellowship from DAE, India. I would like to acknowledge Bhabha Atomic Research Center (BARC), Mumbai, for the same.

Lastly, I would like to thank God for giving me patience, strength and everything that kept me going.

Nayana Shaiwale
