Acknowledgement

I was lucky that I got an opportunity to work in the Atomic Physics world and that too in two different campus, 1. Jnanabharathi campus, Bangalore University, Bangalore and 2. Indian Institute of Science, Bangalore. Both the campuses, with beautiful green environment have a lot of flora and fauna, isolated from the outside noise and rush of the city, creates a great environment for research. It was really a long journey and I was helped by a larger number of people. I want to take this opportunity to thank them.

First of all, I want to thank my supervisor Prof. Sharath Ananthamurthy. Because of his constant guidance and encouragement I was able to finish my PhD. He is also my inspiration and his knowledge and teaching skill is really unforgettable. He is very easy to approach and is always available to students. His concrete logic in any discussion helped me a lot to improve my understanding of Physics. If we ask him any question to clarify any doubt, sometimes he directly clarify our doubt and sometimes he make us to find the answer and also shows the way to find it. This way, after we got the answer, we never forgot it. Thank you, sir, for accepting me as your student and allowing me to work with you.

I also thank Prof. Vasant Natarajan, Department of Physics, IISc, Bangalore for allowing me to work in his lab for a part of my thesis work. He actually opened me the doors of
research. Before joining for PhD in Bangalore University, I worked as project assistant in his lab and the knowledge which I gained during this period helped me in my PhD. Without his help and encouragement, it would not have been possible for me to complete my project.

I want to thank S Raghuveer, the person who is behind the smooth running of Prof. Vasant Natarajan’s lab. He takes care of all the official works and purchasing anything to the lab which saves the time and energy of the students so that they can concentrate only on work.

I also want to thank my senior Dr. K T Satyajith, who did his PhD under the supervision of Prof. Sharath Ananthamurthy. Now he is Assistant Prof. in Amritha University, Coimbatore, TN. He is like my elder brother and helped me whenever required. He not only helped me in work and academic matters but also in non-academic things. His constant encouragement and advice helped me a lot.

When I joined as Project Assistant in Prof. Vasant’s lab, Dr. Kanhaiya Pandey was the senior most student. The initial thing, how to work in the lab I learned from him. His hard-working attitude was inspiring. He has a very deep knowledge of physics and any discussion with him was great. Alok, Ketan, Apurba, Ranjita and Pushpendar were my closest friends. We really had a great time together. We used to have tea and discuss all sorts of thing from Physics to Politics, and from Movies to Sports. Alok was a most enthusiastic person, always the first to organize sports, or lab picnics etc. He used to know where every thing was in the lab, if you can’t find any thing just ask him and he knows where it is. Ketan and Apurba were great at computer and softwares like \LaTeX, Inkscape etc. From writing thesis to my colloquium presentation, Apurba helped me a lot. Infact, I borrowed thesis and colloquium \LaTeX templates from him. Any difficulty while working in \LaTeX, Apurba was always there to solve it. Pushpendar helped me a lot in making figures in Inkscape. Without his help it would be very difficult for me to complete
my thesis in-time. Everyday he used to sit with me whole night until I finish my thesis. Thanks a lot Pushpendar for everything that you helped me. All the very best for your future, brother. I, Dipankar, Nikhil and Zuala worked together in Ion trap experiment. My interaction with them was really inspiring and helpful. Dipankar has a very sound knowledge of Politics and Philosophy, and is a good debater. Nikhil helped me in another experiment which was also a part of my thesis work. His sound knowledge about Physics and instrumentation made my work much easier. Gaurav worked in our lab for a small period of time, but became a very good friend. I also thank Sumanta, Vincet, Harish and Mangesh for their help and good company in the lab. I thank Shivi, who was a Project assistant with me, helped a lot in electronics. I also thank other project assistants, Kumar, Karthik, Pavithra, Roshan, Abhilash and Subbu for their help and support when ever required. I also thank Nitin, Harsh Soni, Anupam, Vishwanath, Rupak, Atul, Amit Maji, Manu, Santhosh, Nadeem, Hemanth, who became very good friends.

Coming to my Bangalore University lab, Prof. Sharath Ananthamurthy works mainly in two areas: Atomic Physics (Ion trap) and soft condensed matter. Soft condensed matter has two labs: Optical tweezer lab and Dual trap lab, and now one more added, Raman lab. I work in Ion trap lab. Dyavappa is my co-PhD student. He has tremendous skill in handling and fixing the equipments. Placing and fixing the electron gun filament is a real headache and tiresome job. The way how he meticulously fix it is really appreciable. He has good knowledge of Physics and instrumentation. I thank him for his help and support. Prakash is my junior and a very helpful person. He is a fast learner. During the middle of my PhD he joined the lab and I enjoyed working with him. His presence in the lab made my work easier. I thank him for his help and support. I thank Mahesh, who was a BS student, for helping in my work. His computational and analytical skills are impressive. I thank Dr. Raghu, my senior and Prof. Sharath’s first student who was working in Optical tweezers. I thank Dr. Yogesh is my BSc and MSc classmate and also we worked together
has always given me moral support in all difficulties. Supporting for me to do PhD, my sister-in-law smt. Sowmya Datar, gave me moral support. My nieces Maithreyi and Hamsika, and my son Advait are the wonderful blessings to our family. They really show us how be lively each and every moment. Last, but not the least, the one who silently and patiently manages everything and gave meaning to my life is my wife, Ashwini. I thank her for supporting my every decision which gave strength to my life.

I also want to acknowledge the financial support from the University Grants Commission (UGC), for giving me a BSR fellowship.
