Objectives
1. To Establish & Evaluate the **Specific Questionnaire Scale system** for Maxillofacial Defects (maxillary and mandibular defects).

2. To Evaluate the Impact of **Definitive Obturator prosthesis** on oral health related quality of life (OHRQol) in maxillary defects (Okay Classification) by **Oral Health Impact Profile (OHIP-Edent)**, **Obturator Functioning Scale (OFS)** and **Maxillofacial Prosthesis Performance Scale (MFPPS)**.

3. To Evaluate the Impact of **Mandibular Resection Prosthesis** on oral health related quality of life (OHRQol) in mandibular defects (Brown’s Classification) by **Oral Health Impact Profile (OHIP-Edent)**, **Obturator Functioning Scale (OFS)** and **Maxillofacial Prosthesis Performance Scale (MFPPS)**.

4. To Evaluate and Compare the impact of definitive obturator prosthesis and mandibular resection prostheses on quality of life by **Oral Health Impact Profile (OHIP-Edent)**, **Obturator Functioning Scale (OFS)** and **Maxillofacial Prosthesis Performance Scale (MFPPS)**.
Inclusion and Exclusion Criteria
INCLUSION CRITERIA:

- Maxillary defects having provision of definitive Obturator after six months of surgery.
- Acquired mandibular defects having provision of mandibular resection guidance after 3 months.
- Age Limit: 30 -75 Years
- Each subject will be informed about the aims & procedures of this study and consent to participate will be obtained before the procedure.

EXCLUSION CRITERIA:

- Any Active or Persistent lesion in relation to the defect site.
- Restrictive mouth opening and the extensive size of the defect.
- Heavy smokers.
- Poor general health.
- Unacceptable quality of prosthesis.
