Acknowledgements

Throughout my Ph.D journey numerous people including my supervisor, well wishers, collaborators, friends and good souls are very support and motivated. It is a pleasant opportunity to expose my heartfelt thanks to all those people who made this thesis possible and contributed in different ways. First of all, I would like to take the grateful opportunity to pay homage to my research guide, Dr. R. Raja, Assistant Professor, Ramanujan Centre for Higher Mathematics, Alagappa University, Karaikudi, for his initial motivation, valuable guidance, support and consistent encouragement. His profound knowledge, dynamism, vision and understanding in Neural Networks inspired me to pursue my doctoral research in the field of Neural Networks. This achievement was possible only because of the unconditional support provided by my sir.

I am thankful for his devoted contribution in reviewing my progress, writing, making correction to improve and finalize the research papers as well as the thesis. I developed the attitude of independent thinking in his association, and build the confidence to pursue independent research. I have him as a systematic and broadly skilled supervisor, who helped me polish my grasp on the principles of both experimental and analytical procedures as well as critical analysis during the tenure of the work. I convey my heartfelt thanks to him for sharing this with me. Further, at this moment of accomplishment, I want to thank my supervisor Dr. R. Raja, for his caring, valuable advice and guiding me at the critical stage of the Doctoral Research, while my family faced various problems in the midst of my work.
Apart from research, I personally feel he is a light of my life.

I would also like to express my deep and sincere gratitude to my collaborators Dr. Jinde Cao, School of Mathematics, Southeast University, Nanjing 211189, China and Dr. G. Rajchakit, Department of Mathematics, Faculty of Science, Maejo University, Chiang Mai, Thailand, for their constant help and valuable suggestions during the entire period of my research work.

My special words of thanks should also go to Dr. N. Anbazhagan, Professor and Head, Department of Mathematics, Alagappa University, for his continuous support and cooperation.

My heartfelt thanks to Prof. C. Ganesamoorthy, Dr. J. Vimala, Mrs. B. Sundara Vadivoo, Dr. R. Jeyabalani, Department of Mathematics, Alagappa University, Dr. S. Amutha, Ramanujan Centre for Higher Mathematics, Alagappa University and Dr. M. Mullai, Directorate of Distance Education, Alagappa University, for their constant moral support pursuing my research work.

I would like to dedicate this thesis to my family, my father G. Chinnamuniyandi (Late), my mother C. Chellammal and my brother C. Kanagaraja, for their love, patience, and understanding and they allowed me to spend most of the time on this thesis. And also, I owe my deepest gratitude towards my close friend Ms. C. Sowmiya for her eternal support and understanding of my goals and aspirations throughout my life. I warmly thanks to my friends, brothers and sisters (S. Pandiselvi, A. Pratap, M. Iswarya & J. Dianavinnarasri) for their support.

I have a great pleasure to thanks to the non-teaching staffs of the Department of Mathematics, Alagappa University, Karaikudi, for their kind help during the period.

I take this opportunity to sincerely acknowledge the University Grant Commission (Rajiv Gandhi National Fellowship), New Delhi, for providing financial assistance in the form of Junior Research Fellowship which buttressed me to perform my research work comfortably.
Last, but not least, I thank the Almighty for giving me sound health, knowledge and courage to complete my work successfully.

C. MAHARAJAN
