Acknowledgements

This journey of earning a PhD has not been without its share of ups and downs but it was one person who was instrumental in seeing me through it; my supervisor, Prof. Muzaffer A. Siddiqi. I would like to express my deepest gratitude and heartfelt thanks to Prof. Siddiqi for making this journey worthwhile and eventful. He has been a beacon of inspiration and a source of motivation all through. Every meeting with him was a confidence booster for me. I am amazed by his personality and his supporting attitude which inspired me to finally reach this milestone in my career.

Further thanks go out to Prof. Iqbal A. Khan, who was instrumental in initiating and guiding me through my initial days of research. His vast depth and breadth of knowledge helped me easily to overcome the learning curve in the rapidly moving area of electronic circuit design. I am sure that without the initial momentum provided by Prof. Khan, it would not have been possible for me finish this work on time.

I would also like express my gratitude to Dr. Sudhanshu Maheshwari for his invaluable tips during the course of this work. His vast research experience was immensely helpful to me whenever I needed to discuss the state-of-the-art. His inputs and his quick eye to spot possible limitations within the state-of-the-art helped me immensely to improve the quality of work carried out within this thesis.

There are a few other people whose friendship, words of encouragement, a few tips here-and-there, can be considered to be contributing factors towards the fruition of this work. They include Prof. Ekram Khan, Dr. Shah Alam and Mr. Samar Ansari. Prof. Khan and Dr. Alam were always available for advice on any aspect of pursuing a PhD while Mr. Ansari was the person who I always had a chat with whenever there were computer-related issues during the course of my work. In addition, he was immensely helpful with many other related-aspects of carrying out such a work.

Last, but not the least, my love, gratitude and sincere appreciation go towards my family who have been my pillar of strength, confidence and hope during the long months I spent working on this thesis. They never gave up hope on me and would talk to me on a daily basis about the problems I faced and would constantly encourage me so as to keep my motivation levels high. They would never let an iota of doubt creep into my confidence and were the driving force into keeping my focus and concentrating on my goals. Without them, surely, this work would not have been possible.
