TABLE OF CONTENTS

INTRODUCTION .......................................................................................................................... 1
1.1 LICHENS- A UNIQUE ENTITY WITH VARIETY OF MORPHOLOGICAL, ANATOMICAL AND
PHYSIOLOGICAL PECULIARITIES ......................................................................................... 1
1.2 LICHENS- A RICH SOURCE OF ACTIVE SECONDARY METABOLITES AND THEIR BIOSYNTHESIS ........ 6
1.3 BIOPROSPECTION OF LICHENS WITH ITS RELEVANCE IN MEDICINAL WORLD .................. 8
1.4 DERMATOPHYTOSES: A MAJOR PROBLEM FOR THE TROPICAL COUNTRIES ....................... 11
1.4.1. GROWTH OF DERMATOPHYTES IN LABORATORY .................................................... 13
1.4.2. MANAGEMENT BY SYNTHETIC DRUGS AVAILABLE IN THE MARKET AND THEIR SIDE EFFECTS ... 13
1.5. WATER BORNE DISEASES- A COMMON HEALTH AND HYGIENE RELATED PROBLEM IN DEVELOPING
COUNTRIES ................................................................................................................................. 14
1.6. MODERN TOOLS AND TECHNIQUES FOR BETTER OF COMPOUND EXTRACTION AND ITS
EXAMINATION .......................................................................................................................... 15
1.7. LICHEN CULTURE- LEADING LIGHT TO ITS CONSERVATION AND BIOPROSPECTION ........... 16
1.8. CULTURE MEDIA MODIFICATION AND PROCEDURAL INFLECTIONS HELPING OUT TO
ENHANCED METABOLITE PRODUCTION ............................................................................... 17

REVIEW OF LITERATURE ........................................................................................................... 18
2.1. LICHEN- A PATH- BREAKING EXAMPLE IN INTERACTIVE ECOLOGY ................................. 18
2.2. MOLECULAR INVESTIGATIONS FOR LICHEN SYMBIOSIS ................................................. 18
2.3. THE LICHEN CULTURE AND THE CHEMISTRY OF THE SECONDARY METABOLITES .............. 24
2.3.1. INTERACTION OF LICHENS WITH MINERAL ELEMENTS ........................................... 24
2.3.2. COMPOUND PRODUCTION BY IN VITRO CULTURE OF LICHENS .................................. 25
2.4. CULTURE CONDITIONS DETERMINING THE GROWTH OF THE LICHENS IN VITRO ............ 41
2.5. BIOPROSPECTION OF THE MEDICALLY IMPORTANT LICHENS WITH SPECIAL REFERENCE
TO THEIR BACTERICIDAL, FUNGICIDAL, ANTIVIRAL AND ENZYME INHIBITORY ACTION ............ 44
2.6. CULTURING OF LICHENS- A RARE APPROACH TOWARDS THE CONSERVATION OF MEDICINALLY
IMPORTANT LICHENS ............................................................................................................... 52

MATERIALS AND METHODS .................................................................................................... 58
3.1. PRELIMINARY STUDY OF LICHEN SAMPLES OF HERBARIUM ........................................... 58
3.2. COLLECTION OF LICHENS FROM WESTERN HIMALAYAS IN UTTARAKHAND(BADRINATH
AND ADJOINING AREAS) .......................................................................................................... 61
3.3. CHEMICAL INVESTIGATION OF SOME IMPORTANT LICHENS ........................................... 64
3.4. PREPARATION OF THE LICHEN CRUDE EXTRACTS ......................................................... 66
3.4.1. EXTRACTION OF SECONDARY METABOLITES: ......................................................... 66
3.4.2. YIELD OF SECONDARY METABOLITES: ................................................................... 67
3.5. CULTURE OF DERMATOPHYTIC FUNGUS ........................................................................ 68
3.5.1. PREPARATION OF SABOURAUD DEXTROSE AGAR MEDIUM (SDA) ............................... 68
3.5.2. PREPARATION OF POTATO DEXTROSE AGAR MEDIUM (PDA) ................................. 69
3.6. CULTURE OF YEAST LIKE MALASEZZA SPP. ..................................................................... 69
3.6.1. DEVELOPMENT OF BPLA2R MEDIUM ...................................................................... 69
3.7. CULTURE OF WATER- BORNE BACTERIAL PATHOGENS .................................................... 70
3.7.1. PREPARATION OF NUTRIENT AGAR MEDIUM (NA) .................................................. 71
3.8. IN VITRO INVESTIGATION FOR THE ANTIMICROBIAL ASSAY OF LICHEN EXTRACTS
AGAINST THE WATER BORNE BACTERIAL PATHOGENS AND FUNGAL PATHOGENS
(DERMATOPHYTES AND MALASEZZA SPP.) ......................................................................... 71
3.8.1. PROTOCOL: BROTH MICRO DILUTION METHOD ....................................................... 71
3.8.2. TESTING FORMAT: .................................................................................................. 73
3.8.3. PREPARATION OF STOCK SOLUTION OF CRUDE EXTRACTS ..................................... 73
3.8.4. PREPARATION OF RPMI 1640 MEDIUM
(DEVELOPER- ROSEWELL PARK MEMORIAL INSTITUTE) ..................................................... 75
3.8.5. PREPARATION OF BPLA2RO BROTH MEDIUM .......................................................... 75
3.8.6. PREPARATION OF MULLER HINTON BROTH MEDIUM (MHB) ..................................... 75
3.8.7. Preparation of McFarland Standard Stocks
3.8.8. Procedure for CFU count
3.8.9. Isolation of microbial DNA through Genomic DNA extraction kit AccuPREP®
(Bioneer Corporation) for RT-PCR based antimicrobial assay of lichens
3.9. Application of Nanomaterial Sciences for bettering the efficacy of the crude extract
3.9.1. Procurement of gold nanoparticles
3.9.2. Characterization of GNPs
3.9.3. Synergistic preparation of the crude extracts with gold nanoparticles (GNPs) and their antimicrobial assay
3.10. Phylogenetic studies of pathogenic strains of bacteria and fungus
3.10.1. Antimicrobial action of lichen extract against water borne bacterial pathogens
3.10.2. Antimicrobial action of lichens against Malassezia spp. and dermatophytes
3.11. Free radical-scavenging ability by the use of DPPH cation (DPPH assay)
3.12. Culture of lichens
3.12.1. Sterilization of the natural thallus of lichens
3.12.2. Various types of cultures
3.12.2.1. Mycobiont culture
3.12.2.2. Whole thallus culture
3.12.3. Culture medium
3.12.4. Radial growth and total biomass as a measure to check the growth of lichens
RESULTS
4.1. Key to the studied lichens
4.2. Taxonomical characters of the studied genera
4.3. Taxonomic positioning of collected samples
4.3.1. Key to the identified lichens and their important characters
4.3.2. Taxonomical characters of the studied genera
4.4. Lichens selected for bioprospection
4.4.1. Extraction of the secondary metabolite in 50% ethanol and other solvents and yield of the crude secondary metabolites
4.5. Antimicrobial testing by CLSI Broth microdilution method
4.5.1. Antibacterial susceptibility testing
4.5.2. Antifungal susceptibility testing
4.6. DPPH Antioxidant assay for value addition in potentially active lichens
4.7. Gold nanoparticles (GNPs) and their synergistic study with Usnea longissima
4.7.1. Characterization of GNPs
4.7.2. Synergistic study of GNPs with Usnea longissima extract
4.8. Antibacterial testing through RT-PCR
4.9. Phylogenetic studies of some selected pathogenic species of Malassezia, dermatophytes and water borne bacteria
4.10. Culture of some selected lichens
4.10.1. Cladonia scabriuscula (Delise) Nyl
4.10.2. Heteroderma diademata (Taylor) Awasthi
4.10.3. Stereocaulon foliolosum var. strictum (C. Bab.) Lamb
4.10.4. Flavoparmelia caperata (L.) Hale (Set-I and Set-II)
