Acknowledgement

The task of acknowledging the help, which was offered to me throughout the study by The God Almighty, my parents, grandmother, siblings, teachers and friends is far bigger than the study itself. I feel scanty of words to the magnitude of their help and I would not have completed this work without enjoying their endless patience and affection. Under this decorum, I would like to recall all of them with utmost gratitude.

The moral zeal and constant care at every count bestowed by my mentors Prof. K. Kemparaju, Professor and Chairman, Department of Studies in Biochemistry, University of Mysore, Mysuru and Dr. K. S. Girish, Professor, Department of Studies and Research in Biochemistry, Tumkur University, Tumakuru, from the beginning of this investigation has helped me to shape this thesis in the present form. It is a pleasure for me to recall his enthusiasm at every stage of study, his critical comments, constant supervision and encouragement on my work. His ceaseless, propitious help and love has enabled me to do the best of my ability in bringing out this research work. I am indebted for his trust in my abilities, for the freedom of work that he has given to me, for identifying and accepting my weak areas, and the affection he has shown to me all through my study. It was a great pleasure and privilege for me to have him as my guide and without whom I couldn't have published good number of research articles in reputed journals. I owe this work to him and seek his blessings in all my future endeavours.
