LIST OF TABLES

Table 1. Percentage of individuals against the variables - Job Involvement, Self esteem, Life Stress & Medico-Psychological Health for the Professional Groups.

Table 2. Mean Score and its interpretation for Job Involvement Scale against the four Professional Groups. (n=100)

Table 3. 'F' ratio (ANOVA) for Job Involvement against the four professional groups.

Table 4. Mean Score and its interpretation for Self esteem Scale against the four Professional Groups. (n=100)

Table 5. 'F' ratio (ANOVA) for Self esteem against the four professional groups.

Table 6. Mean Score and its interpretation for Life-Stress Scale against the four Professional Groups. (n=100)

Table 7. 'F' ratio (ANOVA) for Life Stress and its sub scales against the four professional groups.

Table 8. Mean Score, Rank and its interpretation for the Medico-Psychological Health Scale against the four Professional Groups. (n=100)

Table 9. 'F' ratio (ANOVA) for Medico-Psychological Health and its sub scales against the four professional groups.

Table 10. Percentage of Females and Males against the variables - Job Involvement, Self esteem, Life Stress and Medico-Psychological Health for the Professional Groups. (n=50)

Table 11. Mean Score, its interpretation and 't' values of Job Involvement for Females and Males against the Professional Groups (n=50)

Table 12. Mean Score, its interpretation and 't' values of Self esteem Dimensions for Females and Males against the Professional Groups. (n=50)

Table 13. Mean Score, its interpretation and 't' values of Life Stress Scale for Females and Males against the Professional Groups. (n=50)

Table 14. Mean Score & Rank for Females and Males for Medico-Psychological Health Scale against the Professional Groups. (n = 50)
**Table 15.** Mean Score and 't' values of Medico-Psychological Health Scale for Females and Males against the Professional Groups. (n = 50)

**Table 16.** Percentage of individuals against the Income Levels for the four Professional Groups. (n = 100)

**Table 17.** Correlation coefficient between Income and Job Involvement, Self esteem, Life stress and Medico-Psychological Health for the professional groups. (n = 100)

**Table 18.** $X^2$ & 'C' contingency coefficient between Income Levels and Job Involvement, Self esteem, Life Stress and Medico-Psychological Health Levels. (n = 100)

**Table 19.** Percentage of Females and Males against Income Levels for the professional groups. (n = 50)

**Table 20.** Correlation coefficient between income & Job Involvement, Self esteem, Life Stress and Medico-Psychological Health Levels for females and males. (n = 50)

**Table 21.** $X^2$ & 'C' contingency coefficient between Income Levels and Job Involvement, Self esteem, Life Stress and Medico-Psychological Health levels for Females & Males. (n = 50)

**Table 22.** Percentage of individuals against the Tenure Levels for the four Professional Groups. (n = 100)

**Table 23.** Percentage of Females and Males against Tenure Levels for the professional groups. (n = 50)

**Table 24.** Correlation coefficient between Tenure & Job Involvement, Self esteem, Life Stress and Medico-Psychological Health Levels for the professional groups. (n = 100)

**Table 25.** $X^2$ & 'C' contingency coefficient between Tenure Levels and Job Involvement, Self esteem, Life Stress and Medico-Psychological Health Levels for Professional Groups. (n = 100)

**Table 26.** Correlation coefficient between Tenure & Job Involvement, Self esteem, Life Stress and Medico-Psychological Health Levels for Females & Males for the Professional Groups. (n = 50)

**Table 27.** $X_2$ & 'C' contingency coefficient between Tenure Levels and Job Involvement, Self esteem, Life Stress and Medico-Psychological Health Levels for Females & Males for the professional groups. (n=50)
