List of Tables

Table 1  Characteristics of hepatitis A patients and their stool specimens  44
Table 2  Primers used for RT-PCR and sequencing  45
Table 3  GenBank HAV strains included in comparative phylogenetic analysis of Indian strains of HAV of the present study  50
Table 4  Percent nucleotide and amino acid identities between CP-IND strain and other strains of HAV  52
Table 5  Percent nucleotide and amino acid identities between PN-IND strain and other strains of HAV  52
Table 6  Percent nucleotide and amino acid identities between GBS-IND strain and other strains of HAV  53
Table 7  Analysis of mutations within HAV genotype IIIA strains from India and GenBank  58
Table 8  Comparison of nucleotide and amino acid substitutions using complete genome sequence of all genotype IIIA strains  62
Table 9  Genomic regionwise nucleotide and amino acid substitutions in GBS-IND strain as compared to other IIIA strains  63
Table 10  Analysis of mutations in GBS-IND strain in relation to other Indian and GenBank IIIA strains of HAV  64
Table 11  Unique nucleotide and amino acid substitutions detected in GBS-IND strain by BLAST analysis  64
Table 12  PNI ranges between HAV genotypes I-V (n=27) and subgenotypes IA/IB, IIA/IIB and IIIA/IIB (n=26)  75
Table 13  Amino acids unique to genotype III or subgenotype IIIA or IIB  77
Table 14  Comparative analysis of phylogenetic methods for evaluation of different genomic regions of HAV for genotyping  78
Table 15  Likelihood mapping analysis of HAV strains  79
Table 16  Advantages and disadvantages of methods used for phylogenetic analysis  94
