Chapter No. | INTRODUCTION | REVIEW OF LITERATURE | RESEARCH METHODOLOGY |
------------|-------------|----------------------|----------------------|
I.          |             |                      |                      |
II.         |             |                      |                      |
III.        |             |                      |                      |
IV.         |             |                      |                      |

Page No. | 1 - 7 |
---------|-------|

Sampling technique, selection of block, villages, selection of wheat growers, method of enquiry, limitations of study and concept used.

Methods and technique of analysis
Tabular analysis, average, Lorenz curve, Kurtosis, 't' test, correlation coefficient, Regression analysis, choice and specification of mathematical model, Estimation of marginal physical products, estimation of marginal value products and determination of economic optimum levels of inputs.

GENERAL DESCRIPTION OF THE TRACT | 39 - 54

District: Location and situation of district, Moradabad, Topography, Natural division, climate, rainfall, soils, land utilization, irrigation, cropping pattern, worker and non-worker agricultural production and general characteristics of the district.

Block: Soil, climate, land utilization, irrigation, cropping pattern, crop rotations, and general characteristics of the block.

Villages: Geographical area, cultivated area, irrigated area and area under wheat

FARM STRUCTURE | 55 - 71

Distribution of farm, Skewness, Kurtosis, Irrigation, Human labour force, Hired human labour, Capital investment, Cropping pattern & Cropping intensity.
VI. Economic Analysis of Wheat and Its Contribution in Farm Economy

Distribution of input cost, output, cost concept and measures of farm income and efficiency.

Economics of resource use

Land, input-output ratio, return to capital investment, financial test ratio and return per labour day.

VII. Crop Enterprise Relationship

Comparative economics of crop enterprises and contribution of various important crops in the farm economy.

VIII. Price Determination of Wheat and Its Products

Average cost of production, bulk-line cost and opportunity cost.

Economics of processing of wheat products

Cost of processing and cost of production of wheat flour, percentage break-up of processing cost, cost and returns and financial test ratios.

Processing of joint products of wheat and their cost of production

Percentage break-up of processing cost of joint products, cost and return and financial test ratios.

Processing of joint products of wheat and their cost of production

Percentage break-up of processing cost of joint products, cost and returns and financial test ratios.
MARKETING AND PRICE RELATIONSHIP OF WHEAT AND ITS PRODUCTS 121-162

Marketable surplus
Domestic consumption of wheat, cattle feed consumption of wheat and factors affecting marketable surplus.

Marketed surplus and its disposal pattern
Marketed surplus, disposal pattern of marketed surplus of wheat, place of sale of wheat and time pattern of sales of wheat under different size groups.

Price relationship and marketing of wheat
Product prices:
Structure of arrival and price of wheat, seasonal variation in prices and arrivals of wheat, price and arrival trend of wheat, coefficient of variation in prices and arrivals of wheat and coefficient of correlation.

Marketing of wheat
The Market, Preparation for the market, Packing, Assembling agencies, Marketing channels, Market functionaries, Method of sale, Market charges, Transportation, Producer's share in Consumer's rupees, Seasonal effect on price spread and effect of period of time on price.

FUNCTIONAL ANALYSIS AND OPTIMIZATION OF FARM RESOURCES AND MAXIMIZATION OF WHEAT PRODUCTION 163-173
Production function, Regression equation of wheat, Coefficient of multiple determination, Elasticities of production of farm resources, Marginal productivities of inputs, Economic optimum levels.
XI. SUMMARY  174-197
XII. CONCLUSION, DISCUSSION AND SUGGESTION  198-215
XIII. BIBLIOGRAPHY  216-224
