List of Tables

Table 2.1: Details of the bacterial cultures screened for chitinolysis, used for the isolation of chi, cbp, egln genes and/or cloning and expression hosts.

Table 2.2: Details of the plasmids used in the present work.

Table 2.3: Cloning details of chi, cbp and egln using gene specific primers

Table 2.4: List of primers used to construct chitinases using domain swapping.

Table 2.5: List of primers used to construct chitinase chimeras using domain fusion and deletion.

Table 3.1: Summary of the properties of native and chimeric Bacillus chitinases.
