ACKNOWLEDGEMENTS

The author wishes to express his very deep sense of gratitude to:

Dr. V.D. Gupta, Professor of Physics at the University of Lucknow, for his stimulating guidance and encouragement since the inception of the project up to its conclusion, and getting the high resolution (≈ 0.07 cm⁻¹) rotation-vibration spectra of D₂O (reproduced in Chapter VI), at the Jet Propulsion Laboratory, California Institute of Technology, Pasadena (U.S.A.).

Mrs. V.D. Gupta for her hospitality and motherly care whenever he stayed at Lucknow in the course of his work.

Dr. S.G. Tandon, Professor of Chemistry, at the Ravi Shanker University, Raipur for providing necessary help and facilities for preparing PBHA, and PBHA (CuII) complex. His enlightening discussions were greatly helpful in straightening the basic concepts.

Dr. M.K. Gupta, at the Physics Department, Boston University, Boston (U.S.A.), for suggestions and guidance on the work on Hydrazine derivatives. The Argon ion Laser Raman Spectra of DSH (reproduced in Chapter V) has been provided by him.

Dr. R.V. Varma, Shri B. Mandal and Shri Rampal (all of the Department of Geography, V.S.S.D. College, Kanpur) for tracing the Spectra and other diagrams.

Indian Institute of Technology, Kanpur for readily providing Infrared Laboratory, and Computer facilities.

Shri Kripa Shanker Shukla for his patient and careful typing of the thesis.

All friends and well-wishers who promoted the progress of the work in their own various ways.
