List of Publication

1. Coordination polymers of various architectures built with mixed imidazole/benzimidazole and carboxylate donor ligands and different metal ions: syntheses, structural features and magnetic properties

2. Different Dimensional and Structural Variations in Coordination Polymers of d^{10} Metal Ions Constructed From a Benzimidazole Based Carboxylate Linkers

Rupali Mishra, Musheer Ahmad, Madhav Ram Tripathi, Inorganica Chemica Acta (Communicated)

5. Three New Coordination Polymers of Transition Metal ions Constructed From a Schiff–Based Ligand and Ditopic Pyridine–Based Flexible Coligand: Crystal Structures, Luminescence and Magnetic properties (manuscript under preparation)
