ACKNOWLEDGEMENT

I feel it expedient to express my profound indebtedness, deep sense of gratitude and sincere thanks to Dr. Sanjay Bhardwaj, Reader, Chemistry Department, S.S.V. (P.G.) College, Hapur who not only imparted valuable instructions but also instilled in me a constant fountain of inspirational courage and evoked a keener sense of responsibility and devotion, during this endeavor. It is due to his blessings and analytical guidance that it has become possible for me to complete this work. Words are Paling into insignificance in contemplating their penchant to the subject and their erudite knowledge. Their constructive criticism regarding the delicate frontiers of my topic remained immense value without which it would not have been possible to sum up tremendous amount of analysis during the course of work and draw conclusions. I am highly obliged to him.

I am extremely grateful to my family members for his benevolent help and encouragement during the course of present work and also for extensive support and unforgettable cooperation in preparing this thesis. I shall ever remain indebted to him.

Heart–felt thanks are due to the Director, the staff and all the employees of CDRI, Lucknow for their cooperation in making the required material, data and allied information available to me. Thanks are also due to the Principal, Dr. Rajendra Kumar, S.S.V.(P.G.) College, Hapur Dr. Naresh Pal (HOD) and also other staff members of Chemistry Department, and Director Advance Instrumentation Centre, I.I.T. Roorkee for providing necessary facilities.

I take pleasure in acknowledging my debt to all my colleagues and friends named or un–named, who provided me the environment in casting my work to present stage.

( Sumita Rani )
