ACKNOWLEDGEMENT

I would first and foremost like to express my sincere thanks and gratefulness to my mentor Dr. Debasis Sarkar, Associate Professor, Former Head, Department of Civil Engineering, School of Technology, Pandit Deendayal Petroleum University, Gandhinagar, Gujarat for giving me the golden opportunity to work under him. His professional guidance, support and continuous encouragement made this research possible. Being one of the finest in the field and a great teacher, not only did he provide the guidance and motivation for this work, but also helped and supported at each and every stage of my research. I am deeply indebted to him for his invaluable thoughts that made the research more specific. Many a times he was a proactive man steering and fine tuning me with his own efforts. Without his guidance and persistent help this dissertation would not have been possible. It was fantastic to have the opportunity to work my research under him.

I would sincerely like to express my thanks to the Director, School of Technology, Pandit Deendayal Petroleum University, Gandhinagar, Gujarat. My deepest appreciation to Professor P. L. Patel and all other committee members for giving timely inputs and comments during the presentations making the research highly refined.

I owe this work more than myself to my family members and the people who believed in me. I dedicate this work to my parents Mr. Rajesh G. Gohel and Mrs. Chetana R. Gohel, because since the first day, they believed in me, showed patience, stood by me, and reinforced me whenever I felt somber. They are the ones who taught me the value of time & research oriented vision, direction, hard work and dedication. They expressed their full support and held their nerves during this whole tenure that made the research work really a success story. All my accomplishments are due to the blessings, love and support of my beloved parents. The dream of my late grandmother (Santoshben Wala) has finally come to action, constantly inspired me to do well and has showed me the path even in distress. My ever motivating and encouraging grandfather (Girdharbhai Gohel) who always wanted to see everyone learned and educated would also be very happy sitting in the heavens looking at me. My special thanks to my elder sister, brother-in-law and younger cousin for always cheering me up and constantly upgrading my vision.

A special mention for some people, Mr. Naimish Bhatt who has been more of a friend than a faculty, Ms. Srushti Bhatt for providing me with the first text-books and literature for the research work and Ms. Anal Sheth (Asst. Prof, CEPT University & Ph.D. Research
Scholar, PDPU) who has miraculously been for the support in the finishing days of my thesis be it Bachelors’ or Ph.D.

This research would not have been this complete without help and co-operation of the following fellow doctoral batch mates and friends Mr. Manvinder Singh, Ms. Payal Mehta, Ms. Devanshi Dave, Mr. Mumukshu Trivedi, Ms. Rozaline Maharana, Ms. Zeel Purohit, Ms. Ruchita Shah, Ms. Meera Karamta, Mr. Bhaumik Modi, Ms. Kruti Upadhyay, Mr. Ankit Oza, Mr. Parth Mehta and Dr. Bhavesh Patel. I thank all of them from the bottom of my heart for all the direct, indirect, moral and nitty gritty support that they have provided throughout the research journey. These all friends have made my work more expressive.

I would also like to extend my thanks to the M.Tech students Ms. Himali Thakkar, Mr. Parth Shah, Ms. Khushboo Pandya and Mr. Keval Dabasia for sharing their valuable data.

The successful completion of this research work is also a dedication to all the teachers starting from my school days till the time I have been a student as even today, who all have shaped me this way and instilled their values in me.

Last but not the least, I would like to thank “Mother Nature” and all the “Almighty Gods” for always having a benevolent vision on me and providing me with all the spirituality, cosmic energies, inner strengths, integrity and conviction to accomplish this work and never let me down anywhere. I thank “Mother Nature” also for providing me an opportunity to document and portray this work to the world as all the processes are always present in the nature itself.

Finally, as this thesis is subjected on “Quality”, I bow down and pray to the “Almighty God” to seek the blessings, so that I can deliver with the best of quality the standards in each and every step.

I would like to bestow this thesis with a heart filled with full of emotions to my beloved father who has silently and softly stood by me in all the situations.

Jishnu Rajesh Gohel
