ACKNOWLEDGMENTS

First and foremost I am very grateful to the Almighty God for the blessings and guidance He has conferred upon me throughout the entire period of my doctorate undertaking.

My deepest appreciation goes to my guide Dr. Dhaval Kathiriya for his support and kindness in advising me to keep improving my knowledge and to keep believing in my abilities. A similar level of gratitude is due to the associated scientists of Anand Agricultural University for giving me guidance about plant pathology, package of practice of citrus crop as well as other guidance and expertise as and when needed. It is unlikely that I would have reached completion without their encouragement and support.

It is an overwhelming excitement to express my deepest gratitude to all staff members of the RAI University, Saroda, Ahmedabad.

I would like to give my genuine thanks to my wife, lovely son and my parents for their affection and encouragement.

Finally, my gratitude for all those whose names not mentioned here but in so many ways has been supportive.

I express my appreciation to everyone involved directly and indirectly to the success of this research.
