CONTENTS

INTRODUCTION 1-3
REVIEW OF LITERATURE 4-29
MATERIAL & METHODS 30-31
OBSERVATION:
Germination, Survival and Growth Studies in Triticum aestivum & Glycine max. 32-42
i) Seedling height 43-45
ii) Length of primary root of seedlings 46-48
iii) Number of seminal roots in seedling 49-50
iv) The apparent number of roots in Soybean 51-52
v) Fresh & dry weight of seedlings 53-58
vi) Length & breadth of first leaf 59-63
vii) Length of third internode in wheat & soybean 64-66
viii) Height of mature plant of wheat & soybean 67-69
ix) Productivity or yield:
   a) Inflorescence of Wheat 70-73
   b) Inflorescence of Soybean 74-75
   c) Length of spike of Wheat 76-77
   d) The length of legume of Soybean 78-80
   e) Number of legumes in Soybean 81-82
   f) Number of seeds per spike in Wheat 83-84
   g) Number of seeds per legume in Soybean 85-87
x) Weight of hundred seeds of wheat and soybean 88-91
xi) Protein percentage in wheat and soybean grains 92-94
xii) Leaf nitrogen in wheat and soybean 95-97
xiii) Protein percentage in wheat and soybean leaves 98-101
xiv) Pollen viability 102
xv) pH value 103-104
DISCUSSION 105-130
SUMMARY 131-134
REFERENCES 135-165
