1. Introduction

1.1 Population Data and Outliers

1.2 Effect of presence of outlying observations in the estimate of the parameters

1.3 Outlier detection procedures for a sample from a Johnson SB Distribution when parameters are known

1.4 Outlier detection procedures for a sample from a Johnson SB Distribution when parameters are unknown

1.5 Detection of an Outlier in a sample from Pareto and Burr XII Distributions with known parameters

1.6 Detection of an Outlier in a sample from Pareto and Burr XII Distributions with unknown parameters

2. Effect of presence of outlying observations in the estimate of the parameters of a Johnson SB distribution

2.1 Introduction

2.2 When the largest observation is from a distribution with a shifted location parameter

2.3 When the smallest observation is from a distribution with a shifted location parameter

2.4 When the largest observation is from a distribution with a shifted scale parameter

2.5 When the smallest observation is from a distribution with a shifted scale parameter

2.6 An Example

3. Outlier detection procedures for a sample from a Johnson SB Distribution when parameters are known

3.1 Introduction

3.2 Test statistic for upper outlier
3.2.1 Performance study of test statistic for an upper outlier

3.3 Test statistic for lower outlier

3.3.1 Performance study of test statistic for a lower outlier

3.4 Test statistic for lower and upper outlier pair

3.4.1 Performance study of test statistic for a lower and upper outlier pair

3.5 Test statistic for $k$ lower and $k$ upper outlier pair

3.5.1 Performance study of test statistic for $k$ lower and $k$ upper outlier pair

4. Outlier detection procedures for a sample from a Johnson $S_B$ Distribution when parameters are unknown

4.1 Introduction

4.2 Developing a test statistic when parameters are unknown

4.3 Critical values of the test statistic for detection of an upper outlier

4.4 Critical values of the test statistic for detection of a lower outlier

4.5 Critical values of the test statistic for detection of a pair of lower and upper outlier

4.6 Critical values of the test statistic for detection of a pairs of $k$-lower and $k$-upper outlier

4.7 Performance study

4.7.1 Performance study of test statistic for an upper outlier

4.7.2 Performance study of test statistic for a lower outlier

4.7.3 Performance study of test statistic for a lower and upper outlier pair

4.7.4 Performance study of test statistic for $k$-lower and $k$-upper outlier pairs

5. Detection of an outlier in a sample from Pareto and Burr XII distributions with known parameters

5.1 Introduction

5.2 Test statistic for Pareto distribution and its distribution
5.3 Performance study

5.3.1 Performance study of a test statistic for detection of an upper outlier

5.3.2 Performance study of a test statistic for detection of a lower outlier

5.4 Test statistic for Burr XII Distribution

5.5 Performance study

5.5.1 Performance study for detection of an upper outlier

5.5.2 Performance study for detection of a lower outlier

6. Detection of an outlier in a sample from Pareto and Burr XII distributions with unknown parameters

6.1 Introduction

6.2 Test statistic for Pareto when parameters are unknown

6.3 Critical values of the test statistic for detection of an upper outlier

6.4 Critical values of the test statistic for detection of a lower outlier

6.5 Performance study

6.6 Test statistic for Burr XII distribution when all the parameters are unknown

6.7 Critical values of the test statistic for detection of an upper outlier

6.8 Critical values of the test statistic for detection of a lower outlier

6.9 Performance Study

6.9.1 Performance study of test statistic for an upper outlier

6.9.2 Performance study of test statistic for a lower outlier
