BIBLIOGRAPHY

The American Psychological Association (APA) Publication was the guidelines for writing different types of sources in bibliography such as boxes, journal articles, unpublished dissertation and thesis, unpublished papers presented at the meeting and seminars, unpublished manuscripts, technical reports etc.

The research strictly follows The American Psychological Association (APA) for writing bibliography. The format of The American Psychological Association (APA) was used to prevent the wrong writing bibliography. The samples of the APA style format are shown follow:

1. Bibliography is arranged in alphabetical order by the last names of the first authors. When no author is given, the first word of the title on sponsoring organization is used to begin the entry. Each entry in the bibliography starts at the left margin of the page, with subsequent lines double spread and indented. Extra space is not given between the entries.

2. A bibliography is a list of sources which the researcher actually used for writing a research report. A bibliography contains everything that is either cited or not cited in the body of the report but is used by the researcher. It includes both primary and secondary sources.
