CHAPTER 1: INTRODUCTION AND REVIEW OF LITERATURE 1-28

1. Introduction 1

  1.1. Fungi 1

  1.2. Candida species 2
       1.2.1. Taxonomic position of Candida species 3
       1.2.2. Candida albicans 4
       1.2.3. Candida glabrata 5
       1.2.4. Candida tropicalis 6
       1.2.5. Candida krusei 6

  1.3. Factors causing invasive Candidiasis 7

  1.4. Disease spectrum of Candida species 8

  1.5. In vivo challenges to Candida inside the host 10

  1.6. Virulence attributes and survival strategies of Candida species 10
       1.6.1. Morphogenesis 10
       1.6.2. Hydrolytic enzyme secretion 13
       1.6.2.1. Proteinases 13
2.2.4. Isolation of silver nanoparticles

2.2.5. Characterization of silver nanoparticles
   2.2.5.1. UV-Visible spectroscopy
   2.2.5.2. Dynamic light scattering (DLS)
   2.2.5.3. X-ray diffraction technique
   2.2.5.4. Scanning electron microscopy (SEM)
   2.2.5.5. Energy dispersive X-ray (EDX) Spectroscopy
   2.2.5.6. Transmission electron microscopy (TEM)

2.3. Antifungal susceptibility test

2.4. Disc diffusion assay

2.5. Growth curve study

2.6. Time kill study

2.7. Proton extrusion measurement

2.8. Morphogenesis Assay

2.9. Estimation of hydrolytic enzyme secretion

2.10. Sterol quantitation

2.11. Resistance to oxidative stress in *Candida albicans*

2.12. Surface morphology study of *Candida albicans* by SEM

2.13. Synergistic effect of silver nanoparticles with Fluconazole

2.14. Biofilm and Adhesion assay

2.15. Quantitative real time PCR

2.16. Hemolytic Assay

CHAPTER 3: RESULTS

3.1. Optimization of parameters for silver nanoparticles synthesis
3.1.1 *Candida* strain optimization

3.1.2 Substrate concentration

3.1.3 Reaction pH

3.1.4 Reaction temperature

3.1.5 Reaction time

**3.2. Biosynthesis and Characterization of AgNPs**

3.2.1 Biosynthesis of silver nanoparticles

3.2.2 Characterization of silver nanoparticles

3.2.2.1 Color Change and surface plasmon resonance

3.2.2.2 UV-visible spectrophotometer Analysis

3.2.2.3 Dynamic light scattering (DLS) by AgNPs

3.2.2.4. X-ray diffraction (XRD) pattern of AgNPs

3.2.2.5. Scanning electron microscopy (SEM) study of AgNPs

3.2.2.6. Energy dispersive X-ray spectroscopy (EDX) of AgNPs

3.2.2.7 Transmission electron microscopy (TEM) analysis of AgNPs

**3.3. Effect of AgNPs on growth and viability of *Candida* species**

3.3.1 Inhibitory concentration 90% (IC$_{90}$) and minimum fungicidal concentration (MFC)
3.3.2 Disc Diffusion Assay

3.3.3 Growth curve study of Candida strains in presence of AgNPs

3.3.4 Time required to kill given number of Candida Cells

3.4 Hemolytic Assay

3.5. Effect of AgNPs on hydrolytic enzymes secretion in Candida albicans

3.6. Yeast to hyphae transition

3.7. Effect of AgNPs on Plasma Membrane H\(^+\) - ATPase Activity

3.8. Sterol quantitation assay

3.9. Morphological alterations studied by Scanning electron microscopy

3.10. Resistance to oxidative stress in Candida albicans

3.11. Quantitative real time PCR study of HWP1, SAP1 and ERG11

3.12. Biofilm & Adhesion

3.13. Synergistic Effect of AgNPs along with conventional Antifungal Drug Fluconazole

CHAPTER 4: DISCUSSION

CHAPTER 5: SUMMARY

CHAPTER 6: BIBLIOGRAPHY

CHAPTER 7: APPENDICES
