Acknowledgement

When a person really desires something, all the universe conspires to help that person to realize his dream......

- Paulo Coelho

These six years......the years signifying the golden and the most vital part of one’s life, were the years of crucial learning for me. Though majorly dedicated to Ph.D., this time was an ultimate teacher of mine in virtually all aspects, and will continue to teach me forever, because each day carries a fresh bundle of lessons...... My Ph.D. is one such milestone which will be not just a degree for me, but a collection of important lessons which, if I follow in future, would make the coming milestones easier for me to cross. Here, I would like to glance back at those yester years and express my gratitude for all the people to whom I am indebted to, who have, even in the slightest way, contributed towards my thesis and ushered their experience, love and care in my life, making my research a smooth sailing journey.

The almighty GOD, my creator, is the ultimate source of power for all my endeavours. To express my sentiments for Him is beyond my capacity. It is said that we cannot select our parents and hence our family and the greatest blessing that I have been showered by Him is my family. This thesis would never have turned into reality without the love, care, faith, guidance and emotional support of my dearest parents and brother.

The first important person who has been most involved in this work is my supervisor, Prof. Kasturi Datta. It’s hard to find words to express my gratitude for her, as she has always been a constant source of inspiration, guidance and encouragement for me, since the day I met her, both professionally as well as personally. She has always been listening to my problems with full attention and has given me invaluable advices. Without her immense patience and motherly affection, it would not have been easy for me to sustain the jerks, which were a part of this journey. Her ample faith and confidence in me, her constant support, and inspiration to be on the right path despite of countless hindrances made me up to this position.

My second supervisor, Dr. Jora Ghosh, ‘Jora di’ as we call her, is yet another pillar of strength and care. I have always been inspired by her ways of making difficult things simpler, and giving due importance to all the aspects of life, professional as well as personal, and striking a fine balance between these two. Problems taken at her doorstep would never go unattended. Her initiatives and her precious words of advice in my work would definitely help me in long run.

I am indebted to the present Dean, Prof. K.G. Saxena, and past Deans of the School of Environmental Sciences, whose support made my work sail smoothly. My sincere thanks to the Dean, SLS, for allowing me use the CIF, whenever required.

During this span of research, I was fortunate enough to interact with numerous scientists and work in their laboratory. I express my sincere thanks to Prof. Asis Datta for always generously lending his kind help whenever I needed. I wish to thank Prof. Sudha Bhattacharya for helping and inspiring me in many ways and all the SES faculties for guiding me in some way or the other.

I would like to thank Dr. G.C. Mishra, Director, NCCS, Pune, for allowing me to use the institute’s facilities, along with the animal house facility. I deeply acknowledge Dr. Gopal C Kanduk, NCCS, Pune. The foundation of my work was laid by his invaluable support by allowing me to learn the very basic skills in his lab to initiate the work here, and also frequently helping me with the regents and cell lines. His precious advices and suggestions will help me in long run.
My special thanks to Dr. Rakesh K. Tyagi, SCMM, who never denied me anything I needed, from some valuable reagents and culture room facility to his precious time and guidance. I would also like to thank Dr. Chinmoy Mukhopadhyay, Dr. Gouranga Mukhopadhyay and Dr. Suman Dhar for helping me from time to time and for letting me use the SCMM facilities. Words cannot express my feelings for Dr. S.K. Goswami, SLS, who allowed me to work in his lab as a M.Sc. project trainee and helped me adjust in the J.N.U. environment long before I joined SES.

I thank Dr. Subhra Chakraborty, NIPGR, N.Delhi, for allowing me to use the confocal facility.

It is an undoubted truth, that when we walk ahead, each new step is based on the support of the previous step, which is analogous to the important role played by the elders. The basic instructions, rules, customs, the do's and don'ts along with the technical know-how's are transferred from the seniors to the juniors. In this regard I was fortunate enough to have Dr. Sonu Chand Thakur for her constant help and support, both professionally as well as personally. Sonu madam, with her innocence and 'laughter, the best medicine' attitude, has helped me sustain the most difficult situations. I cannot forget the encouragement and guidance of Jha ji, Jaideep da, Aniruddha da and Anup da and their valuable discussions and healthy criticisms regarding my experiments, whenever they saw me in deep waters. I am highly thankful to Anupama for her caring attitude towards me and for uplifting my spirits by showing her great concern for me, and Vinod, for always lending me his support, throughout. Vivek and Hafeez, my immediate seniors were highly helpful to me in all the aspects and have always shown their care and concern for me, in and out of the lab. They have never denied me their precious time to listen to even the slightest problem I faced and have always given me useful and practical solutions. Anindya cannot be missed out for his good practical hand and timely help. Lab picture is incomplete without Bhaswati, Rachna, Kaustuv, Shubhra, Paramita, Prasad, Sandeep and Anf. Their ever ready care and help in conducting my experiments and writing this thesis is incomparable. Each one of these has always been a constant reason to smile, share things and work happily, like a close-knit family, not missing out the 'tea gang' here! The students who joined our laboratory for their summer training or project work also left their respective marks. It was fun working with Prashant, Maroof, Shreyaa, Vikalp, Lipika, Vikash, Rituparna, Joyita, Shumitash, Diya and Anjali.

Rawat ji and Devisingh ji always maintained the lab in proper shape and provided me with the necessary equipments in time and have always lent their support in the time of need. Laxman's help in formation of this Thesis and official works is duly acknowledged. I also received full technical support from Mr. Venkat, Dr. Gaikwad and from Rawatji in official matters, which allowed a trouble-free work here. The assistance from the staff of the school is duly appreciated.

I thank Khan Sir and Alexander sir of CIF, SLS for helping me with the instruments there.

I can never forget the everlasting constant care and support of my batchmates. I deeply thank Gagan, for always finding solutions to my problems and assisting me in my work in and out of lab, and Neda for her wise and friendly discussions. Gurmeet, Tripti, Tanushree, Mustafa, Abhisya and Jyotiraj have always been a real fun to be with and tension releasers in all respects. SES seniors and juniors were equally supportive towards me. Paramita di, Abhijit, Prabhat da, Shweta, Sutapa di, Deepika di, and Prashant are a few to mention among them.

The SCMM group was always there to lend me the timely help. I would like to thank Parul, Saradhi, Bijj, Sanjay, Nagendra, Ashish, Shipra, Subodh, Ashraf, Sudipta, Sangeeta and Jagannath for always assisting me. I am extremely thankful to the NCCS group, Anuradha, Hema, Gautam, Shalini, Riti, Mansoor, Vineet, Priyanka, Manideepa, Sunit, Rakj, Sushmita, Neetu, Srijit for their kind and friendly nature and genuine assistance in accomplishment of my work there.
I also owe my deep gratitude to all the faculties during my M.Sc., Dr. G.B.K.S. Prasad, Dr. Y.K. Jaiswal, Dr. Ms. P. Kishore and Dr. Mrs. N. Srivastava, SOS, Biochemistry, Jiwaji University, Gwalior, for their invaluable lessons, discussions and guidance in all respects.

With my deepest feelings and warm regards, I would like mention here the motivation, guidance and encouragement given to me by my College Principal and also my favourite teacher, Dr. S. Lakshmi Devi, Rajguru College of Applied Sciences for Women, Delhi University. She had always inspired to me to do something, which can prove to be fruitful and meaningful for everyone.

It is rightly said sometimes, that 1 added to another 1 does not make 2, rather it sums up to 11. I felt the same when I met Manish, my dear husband, in the middle of my Ph.D. He gifted me a life, full of glee and care beyond my imagination. He, being not just my partner, but my 'best friend', has always encouraged and supported me in both the sunny and dark phases so far. Though being thousands of miles away from me at present, he always inspires me in every possible way, and I just cannot find words to thank him for being there for me always.

It is beyond my capacity to express deep feelings about my parent inlaws. I owe my deepest love and respect to them for being treated as their own daughter, and for their constant faith and understanding in me. Nandini, my 'sweet' sis-in-law and Subhas are both my good friends and mentors in all respects. My due respect and love for all my extended family members for encouraging and loving me always, specially Aagi, for being both, a pillar of strength and ocean of love.

My friends outside J.N.U., Prachi, Kshitij, Sanjeev, Rachita, Nidhi and Arun deserve special mention here for always being there for me.

Last but not the least, I thank the UGC excellence funding and ICMR SRF fellowship as being the hasselfree monetary support throughout the tenure of my Ph.D. I am in particular thankful to the staff of ICMR, N.Delhi, for their continued support and friendly treatment, which I highly appreciate being a part of scientific community.

Mansi Prakash
