Acknowledgment

First of all I would like to thank the Almighty God who enabled me to write this acknowledgment. I would like to express my sincere gratitude to my adviser, Dr. S. Patnaik for giving me the opportunity to work on the exciting and developing research area of multiferroics. I deeply appreciate all the time and effort he spent discussing my projects and advising me. I also appreciate all corrections to my papers and thesis, attentive consideration and encouragement he gave me. I have great respect for his knowledge and passion for research. He always encouraged me to go forward to achieve my academic goals.

I would also like to thank all the other faculty members in the School of Physical Sciences, JNU for their constant co-operation and attention during my Ph.D days; specially I convey my thanks to Prof. Subir Sarkar, Prof. R. Ghosh, Prof. Sanjay Puri, Prof. H. B. Bohidar, Prof. S. Ghosh, Dr. B. Kumar and Prof. Akhilesh Pandey. Special thanks are also to Prof. Deepak Kumar for his discussion, concern and kind words of support.

I am also grateful for the insights and advice from Dr. V. Siruguri and Dr. S. D. Kaushik, UGC-DAE-CSR, BARC, Mumbai during Neutron diffraction experiments at Dhruva reactor. Their suggestions and guidance were a great help in analyzing the Neutron diffraction results presented in chapter 6 and 7. Also, the same gratitude goes to Dr. Ashutosh Tiwari, Department of Materials Science and Engineering, University of Utah, Salt Lake City, USA. It was a great honor to join his group and learn thin film synthesis and characterization techniques. I acknowledge Dr. Tiwari for providing thin film of YMnO₃. It is my privilege to thank Dr. V. Ganeshan, UGC-DAE CSR, Indore, for the specific heat measurements.

I wish to acknowledge the Council of Scientific and Industrial Research, India for my research fellowship; Department of Science and Technology, Government of India; and University of Utah for funding my travel and stay in USA. I thank the staff of SPS office: Rishi, Jagmohan, Rajeev, Ram, Narendrabahadur, Pradeep, and Mrs. Shipra. I would also take this opportunity to thank the staff of Periyar hostel for making my stay at JNU comfortable. Special thanks to the mess staff for the numerous meals they served day in and day out.

Without the help of technical staff Mr. Manoj (XRD Facility, AIRF), Mr. Baljeet Singh (Glass-blowing Unit, SLS), Mr. Vinod (USIC), I would not have contemplated the wide-ranging instrumentation and experiments involved in this work. The assistance received from Dr. Ravi Kumar and Material Science Group, IUAC, New Delhi is sincerely acknowledged.
I thank my lab mates Kaushik, Srikala, Shiv, Jitendra, Gyan, and Pradeep for their support and help. Life at SPS would have been definitely mundane without the company of Girish, Tripurari, Santosh, Rakesh, Divya, Madhu, Rajat, Umesh, Bhashkar, Sunil, Sandeep, Vinayak, Pramod, Ashwani, Santinath, Geeta, Suruchi, .... and friends from outside SPS like Dinesh, Anupender, Abhishek, Manoj, Preeti, Shrutl are few whom I remember at the moment. There are also many friends and seniors, whom I have not named here, whose support have enabled me to overcome many setbacks. I would like to thank them for their support.

Above everything, this Ph. D would not have been possible without the constant support, encouragement, blessings and good wishes of my parents. I would never be able to repay their unconditional support and personal sacrifices, which made it possible for me to accomplish this task. I especially want to thank my younger brother Sunil for his support. I express my special gratitude to my grandmother for her support and strength all along.
