ACKNOWLEDGEMENTS

I am indebted to my guide Dr. Rajiv Nigam, who introduced me to the promising and fascinating field of foraminiferal research. He also placed at my disposal his vast and valuable collection of literature and other material on recent foraminifera. His patience, constant encouragement, and thought provoking discussions throughout the course of this work enabled me to complete this thesis from its inception to the end.

I take this opportunity to thank Dr. B.N. Desai, Director, National Institute of Oceanography and to Dr. R.R. Nair, Deputy Director and Head, Geological Oceanography Division, for the facilities and encouragement.

Sincere thanks are extended to Prof. U.M.X. Sangodkar, Head, and Dr. G.N. Nayak, Reader of the Department of Marine Science, Goa University for their help on various occasions.

I would like to express my sense of gratitude to Dr. R.R. Nair, Dr. N.H. Hashimi and Dr. N. Khare for generously devoting their valuable time to critically review the work which has led to the overall improvement of the thesis.

I appreciate Dr. S.J. Desai, Head, Geology Department, M.S. University, Baroda for being kind enough to permit me to use the Scanning Electron Microscope. This part of the work was carried out with the help of Dr. S. Sychanthavong and Ms. Pratibha Singh who generously spared their time. The other staff members are also acknowledged for their valuable help during my visit to the Department.
I am grateful to Dr. A.B. Wagh, Head, Marine Corrosion and Material Division for identifying the barnacle fouling on the relict foraminifera. I also appreciate the courtesy of S/Shri. Sridhar Iyer and V. Ramani for their effort with microphotography. Gratitude is expressed to Dr. Ramesh Babu for providing unpublished data on the seasonal salinity, and to Dr. P.S. Rao for the echograms off Goa. The efforts of Dr. V.N. Kodagali and Shri A.A. Fernandes for the statistical analyses is appreciated.

The photographic illustrations could not have been completed without the sincere support and help of Shri. V.M. Date ably supported by S/Shri. Shaikh Ali and V.M. Sirsat. My sincere thanks to them all for this kind gesture.

Prof. Barun Sen Gupta, Geology Department, Louisiana State University is thanked for the fruitful discussion. Prof. Jorn Thiede and Prof. Warren Prell are acknowledged for reviewing the work on modelling.

M.P. Tapaswi is acknowledged for his ever willing help.

I owe much to the encouragement and help rendered by Dr. S.M. Gupta, S/Shri. M.C. Pathak, K.L. Kotnala, A.K. Chaubey, Rahul Mohan and D. Kavlekar.

Kum. Michelle Menezes is acknowledged for typing of the manuscript and to Shri Deepak Mayenkar for providing unpublished data on planktonic foraminifera and also assistance at the hour of need.

I would like to thank Shri Md. Wahidullah and his team for drawings, Shri. B. Pednekar for xeroxing, Shri. A.Y. Mahale for DTP printout and Shri. Chandrakant for the binding.
I am thankful to the Council of Scientific and Industrial Research (CSIR) for providing me Junior and Senior Research Fellowships and to CSIR Young Scientist Award Project (Grant no 3(19)/YS/90) sanctioned to Dr. Rajiv Nigam.

Last but not the least, to my parents whose love, affection and encouragement provided me the courage to pursue this study and to my brother Dr. Bosco Henriques who took time out in the final stages and offered valuable suggestions for the outlay of this thesis.
