

List of Tables

1	Showing the nonclassicality breaking (NB), entanglement breaking (EB) and complete-positivity (CP) conditions for the three canonical forms. . .	15
1.1	Showing the quantum-limited bosonic Gaussian channels. The noisy versions of these channels are obtained by replacing Y_0 by $Y = Y_0 + a\mathbb{1}$ and so $Y > Y_0$	86
1.2	Showing the OSR of the quantum-limited bosonic Gaussian channels and the classical noise channels.	87
1.3	Showing the composition $X \circ Y$ of quantum-limited channels X, Y assumed to be in their respective canonical forms simultaneously. The composition results, in several cases, in noisy channels thereby enabling description of noisy Gaussian channels, including the classical noise channel $\mathcal{B}_2(a)$, in terms of <i>discrete sets</i> of linearly independent Kraus operators.	93
1.4	Showing the EB bosonic Gaussian channels.	98
3.1	Showing a comparison of the von Neumann and the three-element POVM schemes for the example in Eq. (3.59).	159

5.1 A comparison of the nonclassicality breaking (NB) condition, the entanglement breaking (EB) condition, and the complete positivity (CP) condition for the three canonical classes of channels. 202
