

# **CONTENTS**

**CERTIFICATE**

**DECLARATION**

**ACKNOWLEDGEMENTS**

**ABSTRACT**

**CHAPTER 1: Introduction** **1-14**

**1.1 Halophytes**

**1.2 Salt adaptation in halophytes**

**1.2.1 Physiological basis of salt tolerance**

1.2.1.1 Osmotic adjustment

1.2.1.2 Sodium exclusion and maintenance of ion homeostasis

1.2.1.3 Prevention of oxidative damage

1.2.1.4 Metabolic adjustment

**1.2.2 Regulatory mechanisms in salt tolerance**

1.2.2.1 Signaling mechanisms

1.2.2.2 Transcription factors

**1.3 Objective of the thesis**

**CHAPTER 2: The role of salt acclimation in the ability of *Bruguiera cylindrica* plants to withstand dehydration and osmotic stresses**

**2.1 Introduction** **15-18**

**2.2 Materials and Methods** **19-24**

**2.2.1 Plant material**

**2.2.2 Stress application**

**2.2.3 Cation content**

2.2.4	Relative water content	
2.2.5	Osmometry and electrolytic conductivity measurements	
2.2.6	Proline content	
2.2.7	Respiration measurements	
2.2.8	Lipid peroxidation	
2.2.9	Enzyme extraction and assays	
2.2.10	Statistical analysis	
2.3	Results	25-27
2.3.1	Cation content	
2.3.2	RWC and osmotic adjustment	
2.3.3	Proline content	
2.3.4	Respiration rates	
2.3.5	Lipid peroxidation and antioxidant enzyme activities	
2.4	Discussion	27-32

### **CHAPTER 3: Salt-induced respiration and its role in salt adaptation**

3.1	Introduction	33-35
3.2	Materials and Methods	36-41
3.2.1	Plant material	
3.2.2	Leaf respiration measurements	
3.2.3	Measurement of O <sub>2</sub> uptake using different concentrations of NaCl	
3.2.4	Study of PEG-induced dehydration stress on respiration	
3.2.5	Effect of other cations and anions on respiration	
3.2.6	Respiration in presence of ion transport inhibitors	
3.2.7	Studies on contribution of cytochrome c oxidase (COX) and alternative oxidase (AOX) pathways to respiration	
3.2.8	ROS measurements	
3.2.9	Statistical analysis	
3.3	Results	41-44
3.3.1	Effect of salt (NaCl) concentration on respiration rate	

3.3.2 Effect of PEG-induced dehydration stress on respiration rate	
3.3.3 Effect of various cations and anions on respiration rate	
3.3.4 Effect of ion transport inhibitors on respiration rate	
3.3.5 Effect of respiratory inhibitors and an uncoupler on respiration rate	
3.3.6 ROS generation during respiration	
3.4 Discussion	44-49

## **CHAPTER 4: Identification and characterization of a plasma membrane $\text{Ca}^{2+}/\text{H}^+$ antiporter**

4.1 Introduction	50-53
4.2 Materials and Methods	53-56
4.2.1 Plant material	
4.2.2 Preparation of plasma membrane (PM) vesicles from leaves	
4.2.3 Measuring sensitivity of ATPase in PM vesicles to vanadate, nitrate, and azide	
4.2.4 Measuring sensitivity of ATPase to salt	
4.2.5 Determination of $K_m$ for PM $\text{H}^+$ -ATPase	
4.2.6 $\text{Ca}^{2+}/\text{H}^+$ antiport assay and determination of its $K_m$	
4.3 Results	57-58
4.4 Discussion	58-62

## **CHAPTER 5: Transcriptional regulation of ion transporters**

5.1 Introduction	63-66
5.2 Materials and Methods	66-70
5.2.1 Plant material	
5.2.2 Chemicals	
5.2.3 Total RNA isolation	
5.2.4 Semi-quantitative RT-PCR (reverse transcription-polymerase chain reaction)	
5.2.4.1 cDNA synthesis	
5.2.4.2 Primer design for semi-quantitative RT-PCR	
5.2.4.3 PCR conditions	

5.2.4.4 Analysis of PCR products	
5.2.4.5 Sequencing of PCR amplified products	
<b>5.3 Results</b>	<b>70-71</b>
<b>5.4 Discussion</b>	<b>71-74</b>
<b>CHAPTER 6: General discussion</b>	<b>75-78</b>
<b>Bibliography</b>	<b>79-96</b>
<b>Publications</b>
