CHAPTER VII

Future line of work
CHAPTER – VII

Future line of work

- Development of mango based intercropping is the need of hour to increase production along with increasing income of mango growers. The experiment should continue for further period to study the yield and quality of intercrops and mango.

- Some intercrops may also be tried in the old plantation of mango orchards for better sanitation of main crop and its yield attributing characters.

- In the initial sustainability of mango orchard, green manuring crops, legume crops, spice crops and along with short duration fruit crops may be cultivated as intercrops for higher return.

- The light intensity and soil fertility status need to be studied in future. Keeping in view the increasing demand and area under mango cultivation mango based cropping system should be tried at various locations of the state under rain fed and also irrigated condition.
