List of Figures

Figure 1 Countries committed to address HCAIs ................................................................. 13
Figure 2 India's pledge to address HCAIs ........................................................................... 14
Figure 3 Essential components of SCCmec ............................................................... 22
Figure 4 Analysis of MRSA and MSSA isolates from 20 different countries ...................... 27
Figure 5 Proposed evolutionary models for the emergence of MRSA in CC5 and CC8 ....... 28
Figure 6 Proposed evolutionary models for the emergence of MRSA in CC22, CC30, and CC45 ... 29
Figure 7 Evolutionary origin of the major MRSA clones and the possible relationship between ... 30
Figure 8 Proposed genetic events leading to the emergence of epidemic strains of MRSA ...... 30
Figure 9 Virulence determinants and SCCmec allotypes in hospital-associated MRSA .......... 48
Figure 10 Explosion of knowledge on extended-spectrum β-lactamases ................................ 52
Figure 11 Detection of ESBL and AmpC ............................................................................ 90
Figure 12 Total consumption of antimicrobials ................................................................. 95
Figure 13 Pattern of consumption of antimicrobials .......................................................... 95
Figure 14 Average consumption of antimicrobials in an English teaching DGH ............... 98
Figure 15 Pattern of consumption of antimicrobials in an English teaching DGH ............... 98
Figure 16 Patients colonised with MRSA .......................................................................... 100
Figure 17 Antibiogram of MRSA and MSSA .................................................................. 101
Figure 18 Antibiogram of MSSA ..................................................................................... 101
Figure 19 Antibiogram of CoNS ...................................................................................... 102
Figure 20 Antibiogram of CoNS (pre 72 hours) ............................................................... 102
Figure 21 Antibiogram of meticillin resistant CoNS (pre 72 hours) ..................................... 103
Figure 22 Antibiogram of meticillin resistant CoNS with specific resistance profile .......... 103
Figure 23 Current management structure ......................................................................... 114
Figure 24 Ward and nursing station layout ...................................................................... 116
Figure 25 Operating theatre suit-1 ................................................................................... 150
Figure 26 Operating theatre suit-2 ................................................................................... 151
Figure 27 Operating theatre suit-3 ................................................................................... 152
Figure 28 Operating theatre suit-4 ................................................................................... 153
Figure 29 Typical operating theatre ventilation system ..................................................... 154
Figure 30 Decontamination cycle (reproduced from 296) ................................................ 154
Figure 31 SSD layout: double-door steriliser configuration ................................................. 155
Figure 32 SSD layout: single-door steriliser configuration ................................................. 156
Figure 33 Prevention of antimicrobial resistance in healthcare setting ................................ 158
Figure 34 5-moments of hand-hygiene poster (example in Bengali) .................................... 159
Figure 35 Hand-hygiene (alcohol rub) technique poster (example in Bengali) ................. 160
Figure 36 Hand-hygiene (soap & water) technique poster (example in Bengali) ............... 161
