ACKNOWLEDGEMENT

It gives me immense pleasure to accolade the co-operation and suggestions extended to me during this research work. I wish to express hereunder a few names who contributed significantly to this endeavour:

I am proud and extremely fortunate to have Prof KK Pillai, Head, Department of Pharmacology, as my supervisor. He has been my teacher for nearly a decade. In the best of traditions, I have the highest regard for him. He was deeply involved in this work at every stage: conception, planning, interpretation and presentation of results right upto its present form. His in-depth knowledge, thoughts and efforts always seemed to open new avenues for further improvement. Without his innovative ideas, constant inspiration, encouragement, patient handling of numerous problems and queries, useful advice and continuous support, it would have been impossible to complete this task. No words can adequately express my gratitude for him.

I cherish an inexplicable sense of indebtedness and gratitude Dr Shanthi N Pal, my co-supervisor, who could actually inculcate in me a habit of systematic approach to solve scientific problems. Her vision and intellect always provided me with the much-needed enthusiasm to accomplish my objectives. Her constant and vigilant guidance, constructive criticism and useful discussions throughout the tenure of this thesis was indeed a source of encouragement.

I feel great pride in expressing my regards and profound gratitude to Prof A. Ahmad, ex-Vice Chancellor, Mr. Siraj Hussain, Vice Chancellor, Prof RK Khar, Dean, Faculty of Pharmacy, Prof SK Jain, Dean, Faculty of Science, Jamia Hamdard for encouragement and facilities. The work was carried out under a Senior Research Fellowship from the Council of Scientific and Industrial Research which is gratefully acknowledged.
Help, co-operation and facilities were generously available from many persons viz Prof MSY Khan, Head, Department of Pharmaceutical Chemistry (Spectrofluorimeter), Dr SB Vohora, Head, Department of Medical Elementology and Toxicology (Videopath analyzer and Passive-avoidance apparatus), Prof SK Jain, Head, Department of Biotechnology (Deep freezer), Dr SD Sharma, Central Instrumentation Facility (Internet facility and Chemiluminescence spectrometer) and Mrs Shaukat A Shah, Officer-in-charge, Central Animal House Facility (for constant and timely supply of animals). It has been a pleasure to enjoy fruitful scientific discussions on brain sectioning and synaptosomal preparations with Dr F Islam, Neurotoxicology Laboratory, Department of Medical Elementology and Toxicology.

My sincere thanks are due to Mr Rajbeer, Biostatistics Division, All India Institute of Medical Sciences, New Delhi for help in statistical analysis of data and to Dr. Dwivedi, M/s Perkin Elmer, New Delhi for providing detailed information on the procedures and applications of Chemiluminescence spectrometer enabling intracellular calcium estimations.

Thanks are due to Mr Mushtaq, Mr Sohrab, Mr Anil, Mr Imamuddin and Mr Masood for technical/laboratory assistance and to Mr Mueed Ahmad for secretarial assistance.

Last, but not the least, to my family, colleagues and friends for their affection, encouragement and support.

DIVYA VOHORA
