List of Tables

Table 2.1: Typical Composition of Zr-2,5Nb alloy pressure tube------------------30
Table 3.1: Typical composition of the Zr-2.5Nb alloy ingot--------------------------39
Table 4.1: Chemical compositions of Zr-2.5Nb alloy Pressure tube------------------50
Table 4.2: Morphological features of α grains -------------------------------------64
Table 4.3: Basal pole texture variations between the leading and trailing ends of Zr-2.5%Nb pressure tube manufactured from various routes.------------------------------------------68
Table 4.4: Mechanical properties of pressure tubes produced with different fabrication routes
-----------------------------------------------------------------------------------------------71
Table 5.1: Chemical Composition of material used for the trials ----------------------75
Table 5.2: function of cooling rate (when cooled from 883°C) ------------------------81
Table 5.3: Microstructure details as a function of cooling rate (when cooled from 870°C)---83
Table 5.4: Mechanical Properties of Full Scale Heat Treated Pressure Tube Spools (90.25mm OD X 3.8mm WT) -------------------------------------------------------------87
Table 5.5: Texture coefficient in three principle directions of the tube..................88
Table 6.1: Look-Up Table (LUT) showing different experimental flow stress values for different temperatures, strains and strain rates. Flow stress values for only one strain value are shown here.---------------------------------------------95
