ACKNOWLEDGMENTS

My interest in the economic aspects of Urban Planning was aroused when I was teaching in the School of Planning, Ahmedabad. At that time I became specially interested in studying the operation of land markets and the land-use-patterns which evolve as a result of various institutional, legal and economic forces. An interchange of ideas with some farmers of the fringe area drew my attention to the changing land use pattern in this area and led me to explore the working of fringe land markets.

The discipline of urban economics is relatively new in India. It was Dr. K.K. Subrahmanian, my guide, who encouraged me to pursue the area of my interest. Further, his searching questions relating to my work helped me to develop a sharper perception of the problem. I have benefitted a lot from his constructive criticism and helpful suggestions throughout the course of my work. I sincerely thank him for all the help provided by him.

I have also had the benefit of discussion on the subject of my enquiry with various faculty members of the Sardar Patel Institute of Economics and Social Research,
Ahmedabad and Indian Institute of Management, Ahmedabad. I would specially like to thank Dr. R. Radhakrishna and Dr. P.N. Misra who helped me in clarifying some of the problem areas relating to the econometric part of my work.

My knowledge of actual working of the land market was extremely sketchy to begin with. I owe a better understanding of the land market to various experts in the field. I would specially like to mention Mr. B.V. Doshi, Mr. J.D. Patel, Mr. Anil Bakeri and Mr. Kanubhai Shah. I am thankful to all of them for sparing their time for discussion on several occasions. Thanks on this count are also due to various officials of the Town Planning and Valuation Department of Gujarat State and of the Municipal Corporation of Ahmedabad.

I would take this opportunity to thank various officials of the Collectorate of Ahmedabad, Zilla-Panchayat and various other departments of the Government of Gujarat for their help in data collection. But for their cooperation, this study could not have proceeded as planned.

My search for reading material for my work extended to various libraries in Ahmedabad, Delhi and Bombay. I am thankful to the staff of these libraries for their help.
I gratefully acknowledge the fellowship granted to me by the Indian Council of Social Science Research for undertaking work on my dissertation. I would also like to express my thanks to Sardar Patel Institute of Economics and Social Research, Ahmedabad for providing space and other facilities for my work.

I thank my husband, Charan Wadhva, for his intellectual and moral support throughout the course of my work. I also thank my daughter Meeta who cheerfully bore my frequent absence from home during this period.

Last of all, my thanks are due to Mr. Rajagopalan who did a good job of typing from a messy manuscript.
