ACKNOWLEDGEMENT

I am deeply indebted to Dr. A.B. Vyas of the Zoology Department, Gujarat University, Ahmedabad for suggesting the problem and for his guidance throughout the period of work. Without his affectionate encouragement and help, it would not have been possible for me to complete this piece of work.

My thanks are due to Prof. V.C. Shah, Head, Zoology Department and Director, University School of Sciences, Gujarat University for his encouragement and for his readily and generous help in providing all the facilities during my research. I sincerely extend my thanks to Forest and Agriculture Ministry, Government of India for their kind award of research grant No. 4-3/75 FRX-1-(5) to Dr. A.B. Vyas under the Central Sector Forestry Research Scheme and to Forest and Agriculture Departments, Government of Gujarat, Gandhinagar for granting me leave to undertake this research. I extend my sincere thanks to Dr. S.M. Laliwala, Lecturer, St. Xavier's College, Ahmedabad, who wholeheartedly helped and encouraged me throughout my research work. My sincere thanks to Dr. A.B. Vora, Reader, Botany Department, Gujarat University, Ahmedabad and Dr. R.C. Patel, Lecturer, Science College, Dohad (Panchmahals) for so kindly doing the identification of forestry species. Thanks are also due to my colleagues and friends who have helped throughout the different stages of investigation. Lastly, I thank Mr. Piyushbhai, St. Xavier's College, Ahmedabad for typing this thesis.
