ACKNOWLEDGEMENT

I take this opportunity to express my sincere thanks to Dr.(Mrs.) Lilaben K. Patel, Principal, A. G. Teachers' College, Ahmedabad for giving valuable guidance throughout the period of the study, without her encouragement this study would still be far from complete.

Thanks are also due to Dr.(Mrs.) H.F. Dastoor, Assistant Director (Nursing) who permitted and helped me to plan at every stage to take this research work and allowed me to visit the Nursing Schools in Gujarat State.

This investigation would not have been possible without the co-operation of the Nursing Tutors, Principals of Nursing Schools and Nursing Students who provided data for the study. I also appreciate the help given by my colleagues and friends in collecting data and helping me in refining the tools. Special thanks are due to Mr. and Mrs. Purohit who translated the questionnaire into Gujarati and helped with statistical work.

Finally I thank my relatives and family friends who were a constant source of inspiration, encouragement and support throughout the study.

It was a pleasure for me to complete the work after my retirement. I hope this piece of work will be found useful for the Nursing profession.
