ACKNOWLEDGEMENTS

I am deeply beholden to my teacher and guide Prof. T Rangaswamy for his inspiring suggestions and highly valuable assistance in the completion of my doctoral thesis. Words fail me in expressing my heart-felt gratitude for not only guiding the present academic endeavor, but also in molding my teaching career in the university.

I express my sincere indebtedness to Prof. K Ravindranadh for setting my research pursuits in the right direction. Prof. M. M Naidu and Dr. A. Ramakrishna Rao have played a very significant catalytic role in enriching my knowledge in my chosen field of specialization. My colleagues in the university and friends also deserve a special mention in this context for their moral support.

I am thankful to the authorities of Central Manufacturing Technology Institute, Bangalore, Automotive Component Manufacturing Association, Madras, Indian Machine Tool Manufacturers Association, New Delhi, for providing the requisite information for the conduct of this study.

I am also thankful to the top management of the Automotive Component Manufacturing Firm at Madras for permitting me to use their data for building and validating the model developed in this thesis.

My wife Lakshmi and kids Sailaja, Geervani and Kuladeep have been immensely supportive during the entire period of my research. But for their constant encouragement and total devotion to my academic ambitions, I would not have reached the culmination stage of this research work.

G. Krishnaiah
