1 General Introduction 1
2 Review of Literature 7
3 Objectives 28
4 Description of the study area 29
5 Chapter I: Isolation of bioactive compound from seaweeds
   5.1. Introduction 30
   5.2. Material and methods 33
      5.2.1. Sample collection 33
      5.2.2. Seaweeds extract preparation 33
      5.2.3. Bacterial pathogen 33
      5.2.4. Antibacterial activity by disc diffusion method 34
      5.2.5. The minimal inhibitory concentration (MIC) 34
      5.2.6. Purification of crude extract 35
         5.2.6.1 Thin layer chromatography 35
         5.2.6.2 Preparative thin layer chromatography 35
      5.2.7 Analysis of compound 36
         5.2.7.1 Fourier-transformed infrared (FT-IR) 36
         5.2.7.2 Gas chromatography mass spectrometry (GCMS) 36
   5.3 Result 37
      5.3.1. Antibacterial activity of the seaweeds 37
      5.3.2. Minimum inhibitory concentration 39
      5.3.3. Thin layer chromatography and preparative thin layer 40
         chromatography
      5.3.4 Fourier-transformed infrared analysis 41
      5.3.5. Gas chromatography mass spectrometry analysis 41
   Table 43
   Figure
5.4 Discussion 43
6 Chapter II: Growth study and feed utilization of Mugil cephalus
   6.1. Introduction 48
6.2 Fish taxonomy 50
6.3. Material and methods 52
      6.3.1. Collection of sample 52
      6.3.2. Phytochemical analysis 52
         6.3.2.1. Estimation of protein 52
         6.3.2.2. Lipid estimation 52
         6.3.2.3. Carbohydrate estimation 53
         6.3.2.4. The moisture and ash content 53
         6.3.2.5. Crude fibre content analysis 53
         6.3.2.6 Analysis of minerals 54
6.3.3. Preparation of feeds 55
6.3.4. Analysis of feeds 56
  6.3.4.1 Proximate composition analysis of feed 56
6.3.5. Experimental sites and study period 56
  6.3.5.1 Collection and acclimatization of fish 56
  6.3.5.2 Feeding trial 57
  6.3.5.3 Fish analysis 57
  6.3.5.4 Growth and feed utilization of fish 57
6.3.6 Statistical analysis 58

6.4 Result 59
  6.4.1 Proximate composition of seaweeds 59
  6.4.2 Proximate composition of feed 59
  6.4.3 Water parameter analysis 59
  6.4.4 Growth performance of *Mugil cephalus* 59
  6.4.5 Feed utilization of *Mugil cephalus* 60

Table
Figure

6.5 Discussion 61

7 Chapter III: Immunostimulatory effect in *Mugil cephalus*

7.1 Introduction 67
7.2 Material and methods 71
  7.2.1 Isolation of *Vibrio* sp from infected fish 71
  7.2.2 Pathogenicity test 71
  7.2.3 Characterization of pathogen 71
    7.2.3.1 Biochemical identification 72
    7.2.3.2 Molecular identification of bacteria 72
      7.2.3.2.1 Genomic DNA extraction 72
      7.2.3.2.2 16S rDNA sequence amplification 73
      7.2.3.2.3 Sequencing and phylogenetic analysis 73
  7.2.4 Preparation of bacterial suspension 73
  7.2.5 Feed formulation 74
    7.2.5.1 Hot-water extract of *S. wightii* 74
    7.2.5.2 Preparation of feeds 74
  7.2.6 Experimental setup 75
  7.2.7 Non specific immune response in *Mugil cephalus* 75
    7.2.7.1 Hematological parameters 75
    7.2.7.2 Hematocrit 76
    7.2.7.3 Nitroblue tetrazolium (NBT) assay 76
    7.2.7.4 Lysozyme activity 76
    7.2.7.5 Disease resistance and survival experiment 77
    7.2.7.6 Statistical analysis 77

7.3 Result 78
  7.3.1 Pathogenicity testing 78
  7.3.2 Isolation of bacteria from infected fish 78
    7.3.2.1 Biochemical characteristics 78
    7.3.2.2 PCR amplification 78
7.3.2.3. 16s rRNA sequencing analysis
7.3.2.4 Phylogenetic analysis
7.3.3 Non immune response
  7.3.3.1 Hematological parameters
  7.3.3.2 Hematocrit
  7.3.3.3 NBT and lysozyme
7.3.4 Disease resistant
