List of Figures

Fig. – 2.1: Effect of different media with different concentrations supplemented with 30g/l sucrose + KN (1.0mg/l) on morphogenic responses from apical bud explants derived from in vitro regenerated microshoots of Plectranthus barbatus.

Fig. – 2.2: Effect of different concentrations of carbohydrates (g/l) on multiple shoots proliferation from apical bud explants derived from in vitro regenerated microshoots of Plectranthus barbatus cultured on MS medium containing KN (1.0mg/l), after 20 days of culture.

Fig. – 2.3: Micropropagation from different explants of Plectranthus barbatus collected from in vitro and in vivo cultured on MS medium containing KN (1.0mg/l).

Fig. – 2.4: Main steps in regeneration of plants through micropropagation.

Fig. – 3.1: Direct organogenesis from different explants of Plectranthus barbatus cultured on MS medium containing KN (1.5mg/l).

Fig. – 3.2: Main steps in regeneration of plants through direct organogenesis.

Fig. – 4.1: Indirect organogenesis from different explants derived callus (meristem and non-meristem) of Plectranthus barbatus cultured on MS medium containing BAP + NAA (2.5 + 0.6mg/l).

Fig. – 4.2: Main steps in regeneration of plants through indirect organogenesis.

Fig. – 5.1: Direct somatic embryogenesis from different explants (non-meristem) of Plectranthus barbatus cultured on ½ MS solid medium containing 2,4-D (1.5mg/l).

Fig. – 5.2: Indirect somatic embryogenesis (through callus phase) from different explants derived callus (non-meristem) of Plectranthus barbatus cultured on ½ MS solid medium containing 2,4-D (1.0mg/l).

Fig. – 5.3: Indirect somatic embryogenesis (through cell suspension culture) from different explants derived callus (non-meristem) of Plectranthus barbatus cultured on ½ MS liquid medium containing 2,4-D (1.0mg/l).
Fig. – 5.4: Effect of different media supplemented with 30g/l sucrose + 2,4-D on somatic embryogenesis (through cell suspension culture) from cultured leaf callus of *Plectranthus barbatus*.

Fig. – 5.5: Effect of different carbohydrates + half strength MS medium containing 2,4-D (1.0mg/l) on somatic embryogenesis (through cell suspension culture) from cultured leaf callus of *Plectranthus barbatus*.

Fig. – 5.6: Direct somatic embryogenesis on solid medium.

Fig. – 5.7: Indirect somatic embryogenesis on solid medium.

Fig. – 5.8: Indirect somatic embryogenesis on liquid medium.

Fig. – 5.9: Various steps followed during *in vitro* propagation of *Plectranthus barbatus*.
