</table>
9. Effect of green tea (GT) consumption via drinking fluid (GT extract) or diet (GT diet) on the activity of metabolic enzymes in cortical and medullary homogenates.

10. Effect of green tea (GT) consumption via drinking fluid (GT extract) or diet (GT diet) on enzymic and non-enzymic antioxidant parameters in intestinal and liver homogenates.

11. Effect of green tea (GT) consumption via drinking fluid (GT extract) or diet (GT diet) on enzymic and non-enzymic antioxidant parameters in cortical and medullary homogenates.

Part II

2. Effect of green tea (GT) consumption on several serum parameters with/without gentamicin (GM) treatment.

3. Effect of green tea (GT) consumption on brush border membrane enzymes in intestinal and liver homogenates with/without gentamicin (GM) treatment.

5. Effect of green tea (GT) consumption on brush border membrane enzymes in BBMV isolated from small intestine with/without gentamicin (GM) treatment.

7. Effect of green tea (GT) consumption on uptake of $^{32}$Pi in brush border membrane vesicles (BBMV) from renal cortex with/without gentamicin (GM) treatment.

8. Effect of green tea (GT) consumption on the activity of metabolic enzymes in intestinal and liver homogenates with/without gentamicin (GM) treatment.

12. Effect of green tea (GT) consumption on enzymic and non-enzymic antioxidant parameters in intestinal and liver homogenates with/without gentamicin (GM) treatment.

Part III

2. Effect of green tea (GT) consumption on several serum parameters with/without cisplatin (CP) treatment.

3. Effect of green tea (GT) consumption on brush border membrane enzymes in intestinal and liver homogenates with/without cisplatin (CP) treatment.

5. Effect of green tea (GT) consumption on brush border membrane enzymes in BBMV isolated from small intestine with/without cisplatin (CP) treatment.

7. Effect of green tea (GT) consumption on uptake of $^{32}$Pi in brush border membrane vesicles (BBMV) from renal cortex with/without cisplatin (CP) treatment.

12. Effect of green tea (GT) consumption on enzymic and non-enzymic antioxidant parameters in intestinal and liver homogenates with/without cisplatin (CP) treatment.
