ACKNOWLEDGEMENTS

It is a great pleasure to thank the many people and their blessings which made this thesis possible.

First and foremost I would like to express my deep and sincere gratitude to my advisor Prof. K. I. Ramachandran for his critical insights, valuable guidance and consistent encouragement throughout this research investigation. I am especially grateful for the enthusiastic discussions and the academic freedom enjoyed with him.

I take this opportunity to thank and express my profound gratitude to Poojya Swamiji Abhayamrita Chitanya, Pro-Chancellor, for providing me with excellent opportunities for growth and refinement. His persistent focus on research and generous grants to support all good initiatives are very gratefully etched in my memory.

I am very grateful to Dr. P. Venkatrangan, Vice-Chancellor, who largely inspired quality research, publications and patenting. The initiation and award of internal research grant, under young researcher scheme, supported part of this work. I have learnt a lot during my tenure at his office and am indebted to him for all these and more.

My special thanks are due to Dr. N. S. Pandian, Dean, Post Graduate Programmes, for encouraging me to publish in reputed peer reviewed journals, and for the generous support and advice throughout the period of the research.

I am deeply indebted to my mentor Prof.C.P.Kothandaraman for his extremely valuable guidance and support. I especially admire his thirst for knowledge and his capacity to inspire colleagues.

I am also indebted to Dr Joshi C Haran, my spiritual mentor, Professor and Head, Department of Mechanical Engineering, for his constant encouragement and support. He introduced me to the spiritual path and lovingly endured all my diversions and brought me back to the spiritual track. The initiation in to the realm of almighty stood me in good stead during the challenges encountered in life and helped me in pursuing my research work with unwavering commitment.
I wish to extend my thanks to the doctoral committee members Dr. K. Mohandas, Professor, Department of Mechanical Engineering and Dr. V. P. Mohandas, Professor and Chairperson, Department of Electronics and Communication Engineering, for their timely suggestions and guidance.

I record my profound sense of gratitude and thanks to Prof. V. Sugumaran for all the help he rendered during the first phase of the work. His help in teaching data mining techniques is very warmly acknowledged. He was always available when needed and was a bundle of positive energy to fall back whenever the research process hit a bad patch. I cherish his close association and believe it will continue.

My special thanks to Prof. M. Elangovan for providing computational facilities and a fully furnished, secluded office at the CAD/CAM Lab, which greatly enhanced my productivity.

This research work being inter-disciplinary in nature, there were diverse subjects to get familiar with; I gratefully acknowledges the experts, who were instrumental in doing this. Prof. R. Sundararajan (Digital Signal Processing), Prof. G. Prema (Fuzzy Logic) and Prof. K. Ramesh Kumar (Optimisation techniques).

I thank all my friends and colleagues in the Department of Mechanical Engineering for their support and continuous motivation throughout the entire period of the research.

I owe my loving thanks to my wife Satya and son Aakash. They have lost a lot due to my extended working hours during research. I am greatly indebted to them for their understanding and encouragement. My special gratitude to my mother, sister and extended family members, for their loving support. I fondly remember with gratitude, the encouraging words of my father that are still fresh in my memory even after a year of his demise.

I conclude with humble salutations to the divine grace of my guru, Mata Amritanandamayi Devi.
