PLATES
( 1 to 25 )
Plate 1

A general view of the Tura Range from the southern part of it.
Plate 2

A general view of the Nangwalibra, showing the Tara Sandstone (x).
Plate 2
Plate 3

Fig. 1. Showing joints in clays of the Tura Sandstone Formation, near Tura Town.

Fig. 2. Graded bedding in the sandstone beds, showing two units. Grain size diminishes upward from the base. Tura Sandstone Formation, along Tur-Mankachar road near Tura Town.
Plate 4

Fig. 1. Cross-stratification in the sandstone beds, along the Tura-Dalu road near Bilasipara (Tura Sandstone Formation).

Fig. 2. Section of the Tura Sandstone Formation, showing sandstone and thin band of coal seams, along the Rongju river, near Nangwalibra.
Plate 5

Fig. 1. Weathered limestone of the Siju Limestone Formation along the Someswari river, near Siju Songmong.

Fig. 2. Showing the contact between Siju Limestone Formation and Rewak Limestone Formation along the Someswari river at Siju Artheka.
Fig. 1. Limestone of the Upper part of the Siju Limestone Formation near Darang-Ara-Ning (Nangwalibia). Maximum thickness of it is 1.8 metre.

Fig. 2. Limestone with profuse quantity of foraminifera (Siju Limestone Formation) near Nangwalibia.
Plate 6

Fig. 1.

Fig. 2.
Plate 7

Fig. 1. Limestone with calcite and pyrite crystals (x) of the Siju Limestone Formation near Darang-Era-Aning (Nangwalibbra).

Fig. 2. Limestone with calcite crystals (x) of the Upper part of the Siju Limestone Formation near Sankinigiri.

Fig. 3. Limestone with chert nodules (x) of the Siju Limestone Formation near Siju Songmong along the left bank of the Someswarl river.
Plate 8

Fig. 1. Fossiliferous limestone of the Revak Formation exposed along the Dalmi river near 7 miles post.

Fig. 2. Revak Limestone Formation exposed by Dalmi river, showing the contact between fossiliferous shale (S) and limestone (L).

Fig. 3. Nummulite bearing limestone of the Revak Limestone Formation from the Revak Songmong along the Somesvari river.
Fig. 1. Showing alternation of shale and sandstone of the Bewak Sandstone Formation near Kherapara (16.5 miles post).

Fig. 2. Cross-bedding in the sandstone of the Bewak Sandstone Formation near Bewak Songmonz.
Concretion showing an adequate number of thin layers and the transverse section of it exhibits the characters of septaria in the Rewak Sandstone Formation, near Rewak Songmong.

Voidal concretions in the sandstone beds of the Rewak Sandstone Formation near Rewak Songmong.
Plate 11

Fig. 1. Photomicrograph showing strained and unstrained quartz, Tura Sandstone Formation (Crossed nicols) Magnification X 100.

Fig. 2. Photomicrograph showing mica (M), Tura Sandstone Formation (Cross nicols) Magnification X 100.
Plate 12

Fig. 1. Photomicrograph of Tourmaline, (T), Zircon(Z) in the heavy mineral suite. Tura Sandstone Formation (Crossed nicol). Magnification × 50.

Fig. 2. Photomicrograph of concertina in the heavy mineral suite. Tura Sandstone Formation (Crossed nicol). Magnification × 200.
Fig. 1. Photomicrograph of glauconite showing infiltration in the foraminiferal test. Siju Limestone Formation (Crossed nicols). Magnification X 50.

Fig. 2. Photomicrograph of radial and granular hyaline foraminifera showing radially arranged cryptocrystalline aragonite (A) and granular calcite crystals (C). Siju Limestone Formation (Crossed nicols). Magnification X 120.

Fig. 3. Photomicrograph showing equant calcite crystals in the brachiopod shell. Siju Limestone Formation (Crossed nicols). Magnification X 120.
Fig. 1.

Fig. 2.

Fig. 3.
Fig. 1. Phhtomicrograph showing aragonite (A) and calcite (C) in the gastropod shell. Siju Limestone (Crossed nicols). Magnification X 200.

Fig. 2. Photomicrograph showing oöid completely filled up by drusy calcite mosaic (C) and concentric layers (L). Siju Limestone Formation (Crossed nicols). Magnification X 100.

Fig. 3. Photomicrograph showing oöid partially filled up by drusy calcite mosaic with micritic envelope. Siju Limestone Formation (Crossed nicols). Magnification X 100.
Fig. 1. Photomicrograph of rim-cemented calcite showing rhombohedral cleavage (R) and strained calcite (S). Siju Limestone Formation (Crossed nicols). Magnification X 150.

Fig. 2. Photomicrograph showing dog-tooth ferroan calcite (F). Siju Limestone Formation (Crossed nicols). Magnification X 100.
Fig. 1. Photomicrograph of microcrystalline calcite and microspar showing aggrading neomorphism, and patches of calcite spar (Cs) in matrix showing porphyroid neomorphism. Siju Limestone Formation (Crossed nicols). Magnification X 60.

Fig. 2. Photomicrograph of the porphyrotopic texture, showing calcite (C) and quartz (Q). Siju Limestone Formation (Crossed nicols). Magnification X 60.
Fig. 1. Photomicrograph of microlaminae, marked by clay materials (C) and Quartz (Q).
Siju Limestone Formation (Crossed nicols).
Magnification X 60.

Fig. 2. Photomicrograph of spherulites showing fibrous calcite (C).
Siju Limestone Formation (Crossed nicols).
Magnification X 60.

Fig. 3. Photomicrograph of microstylolite (M)
Siju Limestone Formation (Crossed nicols).
Magnification X 100.
Plate 18

Fig. 1. Photomicrograph of veins showing mosaic calcite crystals, Siju Limestone Formation. (Crossed nicols). Magnification X 60.

Fig. 2. Photomicrograph of vugs (V), Siju Limestone Formation (Crossed nicols). Magnification X 60.
Fig. 1. Photomicrograph of pyrite (P). Siju Limestone Formation (Polarised light). Magnification X 40.

Fig. 2. Photomicrograph of magnetite (M), and hematite (H). Siju Limestone Formation. (Polarised light). Magnification X 40.
Plata 80

Fig. 1. Photomicrograph of radial hyaline foraminifera, showing radially arranged cryptocrystalline calcite (C). Rewak Limestone Formation (Crowned nics). Magnification X 120.

Fig. 2. Photomicrograph showing partial alteration of aragonite (A) to calcite (C). Rewak Limestone Formation. (Without crossed nics). Magnification X 100.
Fig. 1. Photomicrograph of shells, showing outer layer of microcrystalline calcite matrix (M) and inner layer of equant calcite mosaic (C), and dog-tooth ferroan calcite (D). Revak Limestone Formation. (Without crossed nicols) Magnification X 100.

Fig. 2. Photomicrograph showing ooids (O) rim cemented calcite (R) and strained (S) calcite. Revak Limestone Formation (Without crossed nicols). Magnification X 100.
Plate 22

**Fig. 1.** Photomicrograph of porphyroid neomorphism showing patches of neomorphic calcite (C) in the micrite relics. Revak Limestone Formation (crossed nicols). Magnification X 60.

**Fig. 2.** Photomicrograph of porphyrotopic fabric showing calcite (C) and quartz (Q) crystals, enveloped in the micritic matrix. Arrangement of quartz in along the longest axis of the calcite shows the microlaminae. Revak Limestone Formation (Crossed nicols). Magnification X 180.
Fig. 1. Photomicrograph of poikilotopic fabric showing microspar (M) inside larger crystal. Revak Limestone Formation (crossed nicols). Magnification X 100.

Fig. 2. Photomicrograph of veins showing equant clear calcite (C) and tiny pores or voids between micritic matrix and sparry calcite. Revak Limestone Formation (Crossed nicols). Magnification X 100.

Fig. 3. Photomicrograph of hematite (H) showing a fillers of the chambers of the foraminiferal test. Revak Limestone Formation. (Without crossed nicols). Magnification X 40.
Fig. 1. Photomicrograph showing strained (S) and unstrained (U) quartz, Rewak Sandstone Formation (crossed nicols). Magnification X 60.

Fig. 2. Photomicrograph showing microcline (M) and plagioclase (P), Rewak Sandstone Formation (crossed nicols). Magnification X 60.
Fig. 1. Photomicrograph of tourmaline in the heavy mineral suite, Revak Sandstone Formation. (Without crossed nicols). Magnification X 60.

Fig. 2. Photomicrograph of concertina (staurolite) in the heavy mineral suite, Revak Sandstone Formation. (Without crossed nicols). Magnification X 200.

Fig. 3. Photomicrograph of kyanite in the heavy mineral suite, Revak Sandstone Formation. (Without crossed nicols). Magnification X 250.
