CONTENTS

INTRODUCTION 1 - 13

Soil and Microbes
Factors affecting soil microbes

Pesticides
Classification of Pesticides
Permissible limit of pesticides
Fate of pesticides in soil
Microbes in pesticide degradation
Microbial metabolism of insecticides

Endosulfan
Regulatory process of endosulfan in the world
Trade name and formulations of endosulfan
Exposure to endosulfan
Toxicological effects of endosulfan

Biodegradation
Chemical properties influencing biodegradability
Characteristics of microbial metabolism

Background of the study
Significance and Impact of the study
Objectives of the study

REVIEW OF LITERATURE 14 - 22

Soil and Pesticides
Endosulfan and its residues
Effects of endosulfan
Biodegradation of endosulfan
MATERIALS AND METHODS

Study Area

Soil sampling

Analysis of Physico-chemical parameters of soil from NF and CF

   Determination of Moisture content
   Determination of Water holding capacity
   Determination of pH and Electrical Conductivity
   Determination of Organic Carbon Content
   Determination of Nitrogen content
   Determination of Phosphorus content
   Determination of Potassium content
   Determination of Textural class of soil

Analysis of Endosulfan residues from Chemical Farm soil

Biological analysis of both NF and CF soil

   Enumeration of microbes (Bacteria and Fungi) from NF and CF soil

Biodegradation of Endosulfan

   Enrichment of microbial communities and their isolation
   Screening of bacterial isolates for endosulfan degradation in liquid culture media
   Identification of the most potent endosulfan degrading bacterial isolates
   Bacterial growth measurement
   Endosulfan degradation by pure and mixed cultures of bacterial isolates
   Degradation of endosulfan isomers by the bacterial isolates
   Effect of pH on endosulfan degradation
   Effect of Temperature on endosulfan degradation

Extraction of endosulfan

Analysis of endosulfan residues
Genomic characterization of bacterial isolates

Isolation of Genomic DNA
Amplification of DNA using Polymerase Chain Reaction
Sequencing 16S rDNA fragment
Assembling the sequenced parts of the DNA fragment
Sequence alignment using BLAST (Basic Local Alignment Search Tool)

Statistical Analysis of Data
Mass Awareness programmes for farmers from different villages

RESULTS

Physico-chemical parameters of Natural Farm (NF) and Chemical Farm (CF) soil
Analysis of Endosulfan residues from Chemical Farm soil
Biological analysis of soil samples from NF and CF
Biodegradation of Endosulfan
  Enrichment of microbial communities and their isolation
  Screening of bacterial isolates for endosulfan degradation
  Identification of endosulfan degrading bacterial isolates
  Bacterial growth measurement
  Endosulfan degradation by pure and mixed cultures of bacterial isolates
  Biodegradation of endosulfan isomers by the bacterial isolates
Effect of pH on degradation of \( \alpha \) - and \( \beta \)-endosulfan
Effect of temperature on degradation of \( \alpha \) - and \( \beta \)-endosulfan
Effect of pH on growth of bacterial isolates
Effect of temperature on growth of bacterial isolates
Changes in pH of the nutrient media during endosulfan degradation (incubation)

Analysis of endosulfan residues and its metabolites
Genomic characterization of Bacterial Isolates
Physico-chemical analysis of soil from NF and CF
Analysis of endosulfan residues in the Chemical Farm
Biological analysis of NF and CF soils
Biodegradation of Endosulfan
  Enrichment of soil with endosulfan for the isolation of endosulfan resistant microbes
  Screening of the bacterial isolates for endosulfan degradation
  Bacterial growth measurement
  Endosulfan degradation by pure and mixed bacterial cultures
  Effect of pH on endosulfan degradation
  Effect of temperature on endosulfan degradation
  Effect of pH on growth of bacterial isolates
  Effect of temperature on growth of bacterial isolates
  Change in pH of the nutrient media during endosulfan degradation
Molecular studies on Bacterial isolates to identify the Bacteria
Awareness programmes to farmers
