LIST OF FIGURES

Fig. 1. Relationship between oxidized LDL and the genesis of the fatty streak lesion 13

Fig. 2. Structures of some common fatty acids, grouped according to the position of the first double bond with respect to the methyl end of the fatty acid chain 22

Fig. 3. Pathways of biosynthesis of eicosanoids from PUFAs. Competition between the ω-6 and ω-3 fatty acids for the desaturases and cyclooxygenases can influence the relative amounts of eicosanoids formed by the two pathways. 25

Fig. 5. Platelet aggregation inhibiting activity of cuttlefish liver oil 106
