CONTENTS

CHAPTER – I  Introduction ..................................................... 1-16

CHAPTER – II  Construction of Three and Four Associate Class Partially Balanced Incomplete Block Designs Using Method of Duality.................................17-39
  2.0 Introduction ......................................................... 17
  2.1 Dualizing of PBIB design .............................. 19
  2.2 Construction of New PBIB Designs ............. 20
  2.3 Four Associate Class Association .......... 21
      Scheme
  2.4 Three Associate Class Association ............. 23
      Scheme
  2.5 Analysis of Four Associate Class .......... 24
      PBIB Design
  2.6 Analysis of Three Associate Class .......... 26
      PBIB Design
  2.7 Illustrations of Dual Designs..................... 28
  2.8 Series of Constructed Designs .............. 35
  2.9 Graphical Representation of Efficiencies 37
      of Constructed Design
  2.10 Summary and Discussion .......................... 39

CHAPTER – III  Construction of Two Series of Higher Associate Class Partially Balanced Incomplete Block Designs Using Symmetric Differences ...... 40-61
  3.0 Introduction ..................................................... 40
  3.1 Basic Terminology Used in Symmetric ....... 41
      Differences
  3.2 Series – I: Construction of Three .......... 43
      Associate Class PBIB Designs
  3.3 Association Scheme of Three ................. 44
      Associate Class PBIB Designs
3.4 Series – II: Construction of Four Associate Class PBIB Designs 45
3.5 Association Scheme of Four Associate Class PBIB Designs 46
3.6 Illustrations of Constructions of New Series of Designs 47
3.7 Computation of Efficiencies 52
3.8 Listing of Designs of Series – I and Series – II 56
3.9 Graphical Representation of Efficiencies 58
3.10 Summary and Discussion 60

CHAPTER – IV  Construction of Higher Associate PBIB Designs by Using Partial Geometry with Finite Graphs and Boolean Algebra 62-90
4.0 Introduction 62
4.1 Basic Study of Regular Graphs and Partial Geometry 64
4.2 Brief Study of Boolean Algebra 65
4.3 Series – I: Four Associate Class PBIB Designs 67
4.4 Association Scheme of Four Associate Class PBIB Designs 69
4.5 Series – II: Three Associate Class PBIB Designs 70
4.6 Association Scheme of Three Associate Class PBIB Designs 72
4.7 Series of P – Associate Class PBIB Designs 73
4.8 Illustrations of Construction 75
4.9 List of Designs of Series – I, Series – II and Extended Case 86
4.10 Graphical Representation of Constructed Designs 87
4.11 Summary and Discussion 89
CHAPTER – V  Construction of Higher Associate Class Partially Balanced Incomplete Block Designs Using Factorial Combinations .................................91-116
5.0 Introduction .........................................................91
5.1 Series of ‘s’ Associate Class PBIB ..............94 Designs
5.2 Construction Methodology .................................94
5.3 Association Scheme of ‘s’ Associate .........95 Class PBIB Designs
5.4 Illustration of ‘s’ Associate Class PBIB ....96 Designs
5.5 Base Series for Constructing New Series...100 of Three Associate Class PBIB Designs
5.6 Main Theorems .....................................................101
5.7 Illustrations of Theorems...............................105
5.8 List of Designs of Series .................................111
5.9 Graphical Representation of the ...............112 Efficiencies of the New Designs
5.10 Summary and Discussion .................................116

CHAPTER - VI  Construction of Three and Four Associate Class PBIB Designs with Fixed Replicates Using Pairing in triplets System.................................117-137
6.0 Introduction .........................................................117
6.1 Construction of Triplets.................................119
6.2 Series of Three Associate Class PBIB ......120 Designs
6.3 Association Scheme of Series of Three .....121 Associate Class PBIB Designs
6.4 Series of Four Associate Class PBIB .......122 Designs
6.5 Association Scheme for Four Associate ....123 Class PBIB Designs
6.6 Illustrations of Series .................................125
6.7 Listed Designs of Series–I and Series–II ...133
6.8 Graphical Explanation of Newly ..........134 Constructed Designs
6.9 Summary and Discussion .................................137
CHAPTER - VII  Analysis of PBIB Designs and General Solutions of Normal Equations for \( m (m \geq 2) \) Associate Class PBIB Designs ..............................................138-167
7.0  Introduction ..........................................................138
7.1  General Analysis of Higher Associate ....139
     Class PBIB Design
7.2  Reduced Normal Equations for Five ........141
     Associate Class PBIB Design
7.3  Solution of Normal Equations for Five ......144
     Associate Class PBIB Design
7.4  Generalization of Analysis of Higher.......156
     Associate Class PBIB Design
7.5  Numerical Representation of...............158
     General Analysis
7.6  Summary and Discussion ......................166

BIBILOGRAPHY ........................................................................168
