Figure 3.6: Donnan type equilibrium of a swollen anionic polyelectrolyte

Figure 3.7: Infra-red spectra of prepared Polyacrylic acid polymer

Figure 3.8: Effect of concentration of PAA on the dyeing of pretreated cotton with Procion Brilliant Red M5B reactive dye by exhaust dyeing at neutral pH.

Figure 3.9: Effect of concentration of PAA on the dyeing of pretreated cotton with Procion Brilliant Red H7B reactive dye by exhaust dyeing at neutral pH.

Figure 3.10: Effect of concentration of PAA on the dyeing of pretreated cotton with Remazol Brilliant Violet 5R reactive dye by exhaust dyeing at neutral pH. 151

Figure 3.11: Effect of concentration of PAA on the dyeing of pretreated cotton with Procion Red HE-3B reactive dye by exhaust dyeing at neutral pH. 152

Figure 3.12: Effect of concentration of PAA on the dyeing of pretreated cotton with Benzafix Orange ME-2RL reactive dye by exhaust dyeing at neutral pH

Figure 3.13: Effect of concentration of PAA on the dyeing of pretreated cotton with Procion Brilliant Red M5B reactive dye by pad-dry-cure dyeing at neutral pH

Figure 3.14: Effect of concentration of PAA on the dyeing of pretreated cotton with Procion Brilliant Red H7B reactive dye by pad-dry-cure dyeing at neutral pH

Figure 3.15: Effect of concentration of PAA on the dyeing of pretreated cotton
with Remazol Brilliant Violet 5R reactive dye by pad-dry-cure dyeing at neutral pH

Figure 3.16: Effect of concentration of PAA on the dyeing of pretreated cotton with Procion Red HE-3B reactive dye by pad-dry-cure dyeing at neutral pH 156

Figure 3.17: Effect of concentration of PAA on the dyeing of pretreated cotton with Benzafix Orange ME-2RL reactive dye by pad-dry-cure dyeing at neutral pH 157

Figure 3.18: Effect of concentration of cross-linking agent on the dyeing of pretreated cotton with Procion Brilliant Red M5B reactive dye by exhaust dyeing at neutral pH. 161

Figure 3.19: Effect of concentration of cross-linking agent on the dyeing of pretreated cotton with Procion Brilliant Red H7B reactive dye by exhaust dyeing at neutral pH. 161

Figure 3.20: Effect of concentration of cross-linking agent on the dyeing of pretreated cotton with Remazol Brilliant Violet 5R reactive dye by exhaust dyeing at neutral pH. 162

Figure 3.21: Effect of concentration of cross-linking agent on the dyeing of pretreated cotton with Procion Red HE-3B reactive dye by exhaust dyeing at neutral pH. 162

Figure 3.22: Effect of concentration of cross-linking agent on the dyeing of pretreated cotton with Benzafix Orange ME-2RL reactive dye by exhaust dyeing at neutral pH. 163

Figure 3.23: Effect of concentration of cross-linking agent on the dyeing of pretreated cotton with Procion Brilliant Red M5B reactive dye by pad-dry-cure dyeing at neutral pH. 166

Figure 3.24: Effect of concentration of cross-linking agent on the dyeing of pretreated cotton with Procion Brilliant Red H7B reactive dye by pad-dry-cure dyeing at neutral pH. 166

Figure 3.25: Effect of concentration of cross-linking agent on the dyeing of pretreated cotton with Remazol Brilliant Violet 5R reactive dye by pad-dry-cure dyeing at neutral pH. 167

Figure 3.26: Effect of concentration of cross-linking agent on the dyeing of pretreated cotton with Procion Red HE-3B reactive dye by pad-dry-cure dyeing at neutral pH. 167

Figure 3.27: Effect of concentration of cross-linking agent on the dyeing of pretreated cotton with Benzafix Orange ME-2RL reactive dye by pad-dry-cure dyeing at neutral pH. 168

CHAPTER 4

Figure 4.1: IR spectrum of (a) untreated (parent) PAN waste polymer and (b) hydrolyzed PAN (PAN$_{\text{hyd}}$) waste polymer 214

Figure 4.2: Effect of concentration of PAN$_{\text{hyd}}$ on the dyeing of pretreated cotton with Procion Brilliant Red M5B reactive dye by exhaust dyeing at neutral pH. 220
Figure 4.3: Effect of concentration of PAN$_{hyd}$ on the dyeing of pretreated cotton with Procion Brilliant Red H7B reactive dye by exhaust dyeing at neutral pH.

Figure 4.4: Effect of concentration of PAN$_{hyd}$ on the dyeing of pretreated cotton with Remazol Brilliant Violet 5R reactive dye by exhaust dyeing at neutral pH.

Figure 4.5: Effect of concentration of PAN$_{hyd}$ on the dyeing of pretreated cotton with Procion Brilliant Red M5B reactive dye by pad-dry-cure dyeing at neutral pH.

Figure 4.6: Effect of concentration of PAN$_{hyd}$ on the dyeing of pretreated cotton with Procion Brilliant Red H7B reactive dye by pad-dry-cure dyeing at neutral pH.

Figure 4.7: Effect of concentration of PAN$_{hyd}$ on the dyeing of pretreated cotton with Remazol Brilliant Violet 5R reactive dye by pad-dry-cure dyeing at neutral pH.

Figure 4.8: Effect of concentration of cross-linking agent on the dyeing of pretreated cotton with Procion Brilliant Red M5B reactive dye by exhaust dyeing at neutral pH.

Figure 4.9: Effect of concentration of cross-linking agent on the dyeing of pretreated cotton with Procion Brilliant Red H7B reactive dye by exhaust dyeing at neutral pH.

Figure 4.10: Effect of concentration of cross-linking agent on the dyeing of pretreated cotton with Remazol Brilliant Violet 5R reactive dye by exhaust dyeing at neutral pH.

Figure 4.11: Effect of concentration of cross-linking agent on the dyeing of pretreated cotton with Procion Brilliant Red M5B reactive dye by pad-dry-cure dyeing at neutral pH.

Figure 4.12: Effect of concentration of cross-linking agent on the dyeing of pretreated cotton with Procion Brilliant Red H7B reactive dye by pad-dry-cure dyeing at neutral pH.

Figure 4.13: Effect of concentration of cross-linking agent on the dyeing of pretreated cotton with Remazol Brilliant Violet 5R reactive dye by pad-dry-cure dyeing at neutral pH.

Figure 4.14: Infra red spectra of (a) Pure cellulose (untreated cotton); (b) Cotton treated with PAN$_{hyd}$ and C I agent; (c) Cotton treated with PAN$_{hyd}$ and C II agent; (d) Cotton treated with PAN$_{hyd}$ and C III agent; (e) Cotton treated with PAN$_{hyd}$ and C IV agent.

Figure 4.15: Infra red spectra obtained by subtracting spectrum of untreated cotton (a) from that of (b') Cotton treated with PAN$_{hyd}$ and C I agent; (c') Cotton treated with PAN$_{hyd}$ and C II agent; (d') Cotton treated with PAN$_{hyd}$ and C III agent; (e') Cotton treated with PAN$_{hyd}$ and C IV agent.

Figure 4.16: Comparison of Colour strength of various reactive dyes applied by PAN$_{hyd}$-aided neutral exhaust dyeing method.

Figure 4.17: Comparison of colour strength of various reactive dyes.
applied by PANhyd-aided neutral pad-dry-cure dyeing methods

Figure 4.18: Comparison of colour strength of various reactive dyes applied by PANhyd-aided neutral pad-dry-steam dyeing methods 256

CHAPTER 5
Figure 5.1: Fixation and hydrolysis of a typical fibre reactive dye 263
Figure 5.2: Relative reactivities of reactive dyes for cellulosic fibres 264

CHAPTER 6
Figure 6.1: DSC heating curve for Untreated (Parent) cotton 330
Figure 6.2: DSC heating curve for (a) Untreated cotton, (b) Cotton treated with PAA_m alone, (c) Cotton treated with PAA_m + Cl, (d) Cotton treated with PAA_m + CII, (e) Cotton treated with PAA_m + CIII, (f) Cotton treated with PAA_m + CIV 331
Figure 6.3: DSC heating curve for (a) Untreated cotton, (b) Cotton treated with PAA alone, (c) Cotton treated with PAA + Cl, (d) Cotton treated with PAA + CII, (e) Cotton treated with PAA + CIII, (f) Cotton treated with PAA + CIV 332
Figure 6.4: DSC heating curve for (a) Untreated cotton, (b) Cotton treated with PANhyd alone, (c) Cotton treated with PANhyd + Cl, (d) Cotton treated with PANhyd + CII, (e) Cotton treated with PANhyd + CIII, (f) Cotton treated with PANhyd + CIV 333
Figure 6.5 a: SEM Micrograph of the surface of untreated cellulose membrane 335
Figure 6.5 b: SEM Micrograph of the surface of the membrane of cellulose treated with PAA/C II agent 335
Figure 6.5 c: SEM Micrograph of the surface of the membrane of cellulose treated with PAA/C III agent 336
Figure 6.5 d: SEM Micrograph of the surface of the membrane of cellulose treated with PAA/C IV agent 336
