

## List of Figures

Fig. No.	Title of the Figure	Page No.
<b>Chapter - I</b>		
Fig. 1.1	India GDP growth rate	2
Fig. 1.2	Land resources and agriculture	3
Fig. 1.3	Large Dam – Major Irrigation Project	8
Fig. 1.4	Medium Irrigation Project, Dist. Aurangabad	8
Fig. 1.5	Hyderogeological map of India	9
Fig. 1.6	Tube well, largest source of Irrigation in India	12
Fig. 1.7	Irrigation through Dugwell showing a decline in water level	12
Fig. 1.8	Major River Basins of Maharashtra	17
Fig. 1.9	Map of Maharashtra State showing 82% area occupied by Deccan basalt	17
Fig. 1.10	Rainfall distribution and drought prone area of Maharashtra	19
Fig. 1.11	Percolation tank	19
Fig. 1.12	Severe drought in the year 1972	20
Fig. 1.13	Deep pits near the surface of percolation tank	20
<b>Chapter – II</b>		
Fig. 2.1	Panoramic view of Deccan basalt flows	31
Fig. 2.2	Thick and extensive compact basalt flow	36
Fig. 2.3	Top portion of compact basalt flow has become reddish, vesicular and amygdaloidal due to hydrothermal alteration	36

<b>Fig. No.</b>	<b>Title of the Figure</b>	<b>Page No.</b>
Fig. 2.4	Partially or completely filled up vesicles with white or green secondary minerals in the amygdaloidal top portion of compact basalt flow	38
Fig. 2.5	Jointing in the middle part of compact basalt and sheet jointed top portion	38
Fig. 2.6	Closely spaced jointing pattern in compact basalt	40
Fig. 2.7	Broadly spaced jointing pattern in compact basalt	40
Fig. 2.8	Spheroidal weathering in compact basalt	41
Fig. 2.9	The deep weathering effect due to closely spaced jointing in compact basalt	41
Fig. 2.10	Substantial water percolation through closely spaced jointed portion of compact basalt	42
Fig. 2.11	Poor water percolation through broadly spaced jointed portion of compact basalt	42
Fig. 2.12	Columnar jointing in compact basalt yielding polygonal columns	45
Fig. 2.13	Pile of thin irregular flows of amygdaloidal basalt	45
Fig. 2.14	Vesicular amygdaloidal basalt showing partially or completely filled gas cavities with secondary minerals	46
Fig. 2.15	Sheet jointing developed due to weathering in amygdaloidal basalt	46
Fig. 2.16	Pocket of red tachylytic basalt	48
Fig. 2.17	Band of green tachylytic basalt	48

<b>Fig. No.</b>	<b>Title of the Figure</b>	<b>Page No.</b>
Fig. 2.18	Dyke exposed in the Majnoo hill area, Aurangabad	49
Fig. 2.19	Appreciable water yield through closely spaced jointing in dyke	49
<b>Chapter – III</b>		
Fig. 3.1	What is a percolation tank?	55
Fig. 3.2	Cross section of a bund for percolation tank	55
Fig. 3.3	Well survey in progress to shortlist percolation tanks	60
Fig. 3.4	Percolation tank at village Pathri, Tq. Phulambri, hardly receives any water due to insufficient catchment area	60
Fig. 3.5	Poorly permeable percolation tank turned into a storage tank where water stands till the advent of summer	63
Fig. 3.6	Casing of percolation tank had been washed away following spells of heavy rains due to faulty construction	63
Fig. 3.7	Percolation tank at Panchan Wadaon has become defunct due to siltation	65
Fig. 3.8	Leakages in the dam wall owing to lack of maintenance	65
Fig. 3.9	Percolation tank constructed at a lower level than the adjacent agricultural lands and the open wells	67
Fig. 3.10	Geohydrological study of open well	67
Fig. 3.11	Percolation tank with excessive silt deposition	74
Fig. 3.12	Topographic survey of percolation tank	74

<b>Fig. No.</b>	<b>Title of the Figure</b>	<b>Page No.</b>
	<b>Chapter - IV</b>	
Fig. 4.1	Women fetching water	81
Fig. 4.2	Villagers dependent on tankers	81
Fig. 4.3	Discussion on impact of percolation tank with the village community	82
Fig. 4.4	Interaction with the village Panchayat leaders	82
Fig. 4.5	Central Ground Water Board, Central Region, Nagpur	83
Fig. 4.6	A map showing administrative divisions of Maharashtra	83
Fig. 4.7	Area under study	84
Fig. 4.8	Demarcation of basaltic flows in the well section	84
Fig. 4.9	Geological section of wells in the command area of Hivra MI Tank at 567 MSL	89
Fig. 4.10	Vertical Geological section of Hivra MI Tank	90
Fig. 4.11	Geological section of wells in the command area of Banshendra PT at 630 MSL	93
Fig. 4.12	Vertical Geological section of Banshendra Percolation Tank	94
Fig. 4.13	Geological section of wells in the command area of Bhambarwadi PT at 685 MSL	97
Fig. 4.14	Vertical Geological section of Bhambarwadi Percolation Tank	98
Fig. 4.15	Geological section of wells in the command area of Revgaon PT at 496 m MSL	101
Fig. 4.16	Vertical Geological section of Revgaon Percolation Tank	102

<b>Fig. No.</b>	<b>Title of the Figure</b>	<b>Page No.</b>
Fig. 4.17	Geological section of wells in the command area of Pokhari PT at 590 MSL	105
Fig. 4.18	Vertical Geological section of Pokhri Percolation Tank	106
Fig. 4.19	Geological section of wells in the command area of Varud PT at 555 MSL	108
Fig. 4.20	Vertical Geological section of Varud Percolation Tank	109
Fig. 4.21	Geological section of wells in the command area of Butkheda PT at 572 m above MSL	112
Fig. 4.22	Vertical Geological section of Butkheda Percolation Tank	113
Fig. 4.23	Geological section of wells in the command area of Harangul PT at 620 MSL	116
Fig. 4.24	Vertical Geological section of Harangul Percolation Tank	117
Fig. 4.25	Geological section of wells in the command area of Jajnur PT at 624 MSL	119
Fig. 4.26	Vertical Geological section of Jajnur Percolation Tank	120
Fig. 4.27	Geological section of wells in the command area of Khanapur PT at 576 MSL	123
Fig. 4.28	Vertical Geological section of Khanapur Percolation Tank	124
Fig. 4.29	Geological section of wells in the command area of Kakaramba PT at 631 m above MSL	126
Fig. 4.30	Vertical Geological section of Kakramba Percolation Tank	127

<b>Fig. No.</b>	<b>Title of the Figure</b>	<b>Page No.</b>
Fig. 4.31	Geological section of wells in the command area of Dudhodi PT at 638 m above MSL	130
Fig. 4.32	Vertical Geological section of Dudhodi Percolation Tank	131
Fig. 4.33	Geological section of wells in the command area of Kerul PT at 600 MSL	134
Fig. 4.34	Vertical Geological section of Kerul Percolation Tank	135
Fig. 4.35	Geological section of wells in the command area of Patsara PT at 710 m above MSL	137
Fig. 4.36	Vertical Geological section of Patsara Percolation Tank	138
<b>Chapter – V</b>		
Fig. 5.1	Model No. 1 : Two compact basalt flows outpoured in quick succession	153
Fig. 5.2	Model No. 1 : Jointed compact basalt underlain by hydrothermally altered vesicular amygdaloidal top portion of another compact basalt flow	153
Fig. 5.3	Lithologs of different percolation tanks from which Model No. 1 is derived	154
Fig. 5.4	Model No. 1 : Well section showing weathered sheet jointed amygdaloidal top portion of the lower flow, Dhudodi, Tq. Bhoom, Dist. Osmanabad	156
Fig. 5.5	Model No. 2 : Fresh Amygdaloidal Basalt underlain by jointed compact basalt Pokhari Tq. Jafrabad, Dist. Jalna	156

<b>Fig. No.</b>	<b>Title of the Figure</b>	<b>Page No.</b>
Fig. 5.6	Lithologs of Bhambarwadi and Pokhri percolation tanks from which Model No. 2 is derived	160
Fig. 5.7	Model No. 2 : Fresh vesicular amygdaloidal basalt underlain by jointed compact basalt	161
Fig. 5.8	Model No. 2 : Well section showing lateral percolation at bottom only. No percolation seen from the upper flow. Bhambarwadi Tq. Kannad, Dist. Aurangabad	161
Fig. 5.9	Lithologs of Banshendra and Butkheda percolation tanks exhibiting Model No. 2	163
Fig. 5.10	Model No. 3 Sheet jointed vesicular amygdaloidal basalt underlain by jointed compact basalt	165
Fig. 5.11	Model No. 3 Well section at Butkheda, Tq. Jafrabad, Dist. Jalna	165
Fig. 5.12	Lithologs of Kerul and Patsara percolation tanks falling under Model No. 4	167
Fig. 5.13	Model No. 4 : Fresh Amygdaloidal Basalt underlain by another Amygdaloidal Basalt, Patsara, Dist. Beed	168
Fig. 5.14	Model No. 4 : Well section Kerul, Tq. Ashti, Dist. Beed	168
Fig. 5.15	Lithologs of Khanapur and Kakramba percolation tanks from which Model No. 5 is derived	171
Fig. 5.16	Model No. 5 : Jointed compact basalt underlain by volcanic breccias, Khanapur, Tq. and Dist. Osmanabad	172
Fig. 5.17	Model No. 5 : Well section Kakaramba Tq. Tuljapur Dist. Osmanabad	172

<b>Fig. No.</b>	<b>Title of the Figure</b>	<b>Page No.</b>
Fig. 5.18	Lithologs of Harangul and Jajnur percolation tanks covered under Model No. 6	175
Fig. 5.19	Model No. 6 : Volcanic Breccia underlain by jointed compact basalt	176
Fig. 5.20	Well section showing Volcanic Breccia underlain by jointed compact basalt Harangul Tq. and Dist. Latur	176
<b>Chapter – VI</b>		
Fig. 6.1	Borewell overflowing at village Jalki, Tq. Sillod, Dist. Aurangabad	182
Fig. 6.2	Lithologs of all the percolation tanks at a glance	185
Fig 6.3	Model No. 1	186
Fig 6.4	Model No. 2	187
Fig 6.5	Model No. 3	187
Fig 6.6	Model No. 4	187
Fig 6.7	Model No. 5	188
Fig 6.8	Model No. 6	188
Fig. 6.9	A borehole of 150 mm diameter drilled at the surface of the reservoir	191
Fig. 6.10	Filter bed and borehole constructed for induced recharge at Hivra MI tank	192
Fig. 6.11	Casing pipe above the elevation of the spillway and closed with cap at top	193
Fig. 6.12	Perforation in casing pipe	193
Fig. 6.13 and 6.14	Recharge gallery with filter media	195
Fig. 6.15	Increased storage capacity of percolation tank	197
Fig. 6.16	Due to poor permeability, percolation tank turning into storage tank	197
