# Contents

1 Introduction

1.1 Introduction ........................................ 1
1.2 Frailty Models ........................................ 2
1.3 Consequences of Ignoring Frailty .................... 2
1.4 Modeling Frailty ...................................... 4
1.5 General Shared Frailty Model ......................... 6
1.6 General Correlated Frailty Model ..................... 8
1.7 Reversed Hazard Rate .................................. 10
1.8 Model Selection Criteria ............................. 10
1.9 Chapterwise Summary ................................. 14

2 Shared Gamma Frailty Models ......................... 18

2.1 Shared Gamma Frailty Model .......................... 18
2.2 Baseline Distributions ................................ 19
2.2.1 Generalized log-logistic distribution ............. 19
2.2.2 Generalized Weibull distribution .................. 21
2.3 Proposed Models ..................................... 22
2.4 Likelihood Specification and Bayesian Estimation of Parameters 24
2.5 Simulation Study .................................... 29
2.6 Analysis of Kidney Infection Data ................... 33
2.7 Conclusion .......................................... 40
3 Shared Inverse Gaussian Frailty Models

3.1 Introduction ........................................ 42
3.2 Shared Inverse Gaussian Frailty Model .............. 44
3.3 Proposed Models ................................... 45
3.4 Likelihood Specification and Bayesian Estimation of Parameters 46
3.5 Simulation Study .................................. 52
3.6 Analysis of Kidney Infection data ................. 55
3.7 Conclusion .......................................... 60

4 Correlated Gamma Frailty Models

4.1 Introduction ........................................ 63
4.2 Correlated Gamma Frailty Model ...................... 64
4.3 Proposed Models ................................... 66
4.4 Likelihood Specification and Bayesian Estimation of Parameters 67
4.5 Simulation Study .................................. 71
4.6 Analysis of Kidney Infection data ................. 75
4.7 Conclusion .......................................... 80

5 Shared Gamma Frailty Models based on Reverse Hazard Rate

5.1 Introduction ........................................ 82
5.2 General Shared Frailty Model Based on Reversed Hazard Rate 84
5.3 Shared Gamma Frailty Model Based on Reversed Hazard Rate 86
5.4 Baseline Distributions ................................ 87
5.4.1 Generalized log-logistic type I distribution ........ 87
5.4.2 Modified inverse Weibull distribution ............ 87
5.5 Proposed Models ................................... 88
5.6 Likelihood Specification and Bayesian Estimation of Parameters 89
5.7 Simulation Study .................................. 92
5.8 Australian Twin Data ................................ 97
CONTENTS

5.9 Conclusion ........................................ 111

6 Shared Inverse Gaussian Frailty Models based on Reverse Hazard
   6.1 Shared Inverse Gaussian Frailty Model ............. 113
   6.2 Proposed Models ................................... 114
   6.3 Likelihood Specification and Bayesian Estimation of Parameters 115
   6.4 Simulation Study .................................. 118
   6.5 Australian Twin Data ............................... 123
   6.6 Conclusion ...................................... 129

7 Correlated Gamma Frailty Models based on Reverse Hazard 131
   7.1 Correlated Frailty ................................. 131
   7.2 Correlated Gamma Frailty Model Based on Reversed Hazard Rate ................. 134
   7.3 Proposed Models ................................ 136
   7.4 Likelihood Specification and Bayesian Estimation of Parameters 137
   7.5 Simulation Study ................................ 141
   7.6 Analysis of Australian Twin data .................. 146
   7.7 Conclusion ..................................... 150

8 Comparison and Conclusion .................................. 153
   8.1 Introduction .................................. 153
   8.2 Comparison of frailty models based on hazard rate .......... 154
   8.3 Comparison of frailty models based on reversed hazard rate .... 155
   8.4 Conclusion ..................................... 157
      8.4.1 Based on hazard rate ....................... 157
      8.4.2 Based on reversed hazard rate ............. 158
