ACKNOWLEDGEMENT

Working on this thesis has been a unique experience; mixed with periodic bouts of agony and ecstasy. The frenzy of emotions could have swept me off my feet but for the timely help coming from various quarters. Therefore, I owe a lot to several individuals who contributed in a variety of ways towards the completion of this work.

My greatest debt is to my supervisors, Prof. O.P. Bagai (Statistics) and Prof. R.N. Soni (Economics) for their active involvement, valuable suggestions, and constant encouragement at every stage of this work. In spite of heavy demands on their time, they were available, whenever I needed their advice. But for them, the study would have never been what it is.

I am indeed grateful to my worthy teachers at the P.U. Chandigarh and I.S.I. New Delhi who shaped my ideas at the formative stage. Perhaps I owe them far more than these words could express.

My thanks are due to Dr. B.L. Kapur (Formerly, P.U. Chandigarh), Dr. Y.P. Aggarwal and Mr. Murli Dhar (MIEPA, Delhi), and Mr. Vinod Parmami (R.C.C., Chandigarh) for their unfailing cooperation during the computation and analysis of the data.
I am also thankful to the Chairman, Department of Statistics, P.U. Chandigarh and the Chairman, Department of Economics, P.U. Chandigarh for providing me all the facilities needed for the purpose. I also thank my colleagues and friends in the Departments of Economics and Statistics for their helpful suggestions and willing cooperation.

I wish to record my gratitude to my teacher, Rev. Balwant R. Kandori, my pupil and colleague, Sh. Pardeep Sharma, and my wife, Shashi, who stood by me throughout this enduring journey.

And finally, Mr. Jagmohan Singh deserves to be complemented for his workmanship and thanked for the personal interest he has taken in typing the thesis.
