Appendix
Appendix

Dear colleague, the present questions which you are going to answer are for a research being done for degree of Ph.D in ELT from Panjab University; any information from your side will be a valuable help for the researcher contributing to the field of English Language Teaching. So, the researcher kindly requests you to pay more time to answer the questions. Thanks for your kind cooperation, Behnam Hashemi, Ph. D scholar, English department, Panjab University, Chandigarh.

Part I: personal information

Gender: male: ☐ female ☐
Graduation: General B. ed ☐ English ☐ other ☐
Years of experience: below 10 ☐ between 10-20 ☐ more than 20 ☐
Age: less than 30 ☐ between 30-40 ☐ above 40 ☐

Amount of pre-service or in-service teacher training courses regarding the ICT use in English classes
below 10 hrs ☐ between 10-20 hrs ☐ more than 20 hrs ☐

Please tick the extent to which you use the following Information and Communication Technologies (ICT) during your English teaching profession in English classes.

19. Parents asking for the facilities play an important role for the English teachers to use ICT.

20. Existence of updated and proper ELT software at school increases the ICT use among English Language teachers.

21. Internet speed plays an important role in ICT use among English teachers.

22. In-service training programs for English teachers increase the tendency to use ICT among English Language teachers.

23. Including enough time in school calendar for ICT increases English teachers' tendency toward using them.

24. Ability to manage English Language lab can affect the tendency toward using it.

25. Ability to work in multimedia for ELT can affect the tendency toward using it.

26. Literacy to use internet to teach English can affect the tendency toward using it.

27. Ability to use DVDs & CDs to teach English affects the tendency toward using it.

28. Ability to use downloaded materials to teach English can affect the tendency toward using them.

29. Ability to use power points to teach English can affect the tendency toward using them.

30. Ability to use computer for teaching English can affect the tendency toward using it.

31. Ability to test learners’ Language by computer can affect the tendency toward using it.

32. Ability to use computer games to teach English can affect the tendency toward using it.

33. Ability to use social network to teach English can affect the tendency toward using it.

34. Ability to use mobile phone to teach English can affect the tendency toward using it.

35. Ability to use smart board to teach English can affect the tendency toward using it.
INFORMATION AND COMMUNICATION TECHNOLOGIES (ICTS) IN ENGLISH LANGUAGE TEACHING AND LEARNING

Behnam Hashemi

The researcher in this paper will address modern technology as Information and Communication technologies, which has become possible in our communities since the availability of computers. Moreover, to what extent we can use it in education in general and English Language teaching/learning (ELT) in particular, according to our needs. Information Communication Technologies should be effectively used to shift from teacher-centered approach to the student-centered approach in teaching or learning English. As technology has created change in all aspects of society, it is also changing our expectations of what students must learn in order to function in the new world. Students will have to learn programmed materials and to steer through large amounts of information via computer into the web, to master new knowledge with these innovative technologies.

Introduction

Information and Communication Technologies (ICTs) has completely shaped our modern life. ICT is the term that is currently used worldwide to describe new technologies which depend mainly on computers nowadays. Even the traditional technologies such as radio, television and telephone are considered as ICTs. The United Nations Development Programme (2003) defines ICTs as:

"Basically information-handling tools - a varied set of goods, applications and services that are used to produce, store, process, distribute and exchange information. They include the 'old' ICTs of radio, television and telephone, and the 'new' ICTs of computers, satellite and wireless technology and the Internet. These different tools are now able to work together, and combine to form our 'networked world' a massive infrastructure of interconnected telephone services, standardized computing hardware, the internet, radio and television, which reaches into every corner of the globe".

Technological innovation has changed the social, political, economic, and cultural fabric of life since the end of the Cold War (Taylor, 2001). Information and communication technologies (ICTs) have been instrumental in social transformations - from the industrial society of the 20th century to the "network society" of the new age of "Informationalism" - where even intercontinental neighbors are now one button-push away (Castells, 1996). Information and communication technologies (ICTs) are a double-edged sword destructive and beneficial to the extreme. Therefore, we have to face this fact and react immediately. We should ask ourselves about its availability and its affordability concerning its cost in our developing countries. In addition, we have to determine its effectiveness and suitability to the different educational contexts.

The Information and Communication Technologies (ICTs) have a vital role in the process of any language teaching and learning. Evidently, no one would deny its contributions to the educational field. Especially, to the teaching and learning of English language they have a considerable influence on the way we teach and the content we deliver. The new ICTs are much faster than the traditional ones and it might give an immediate feedback as well as the instant interaction.

The ICTs are potentially more open and affordable to be owned and operated by schools, universities, private institutions, or even by individuals, who can control the process according to the one's own needs and wants for better controlled outcome and quality.
Information & Communication Technologies in ELT

Most of Indian schools, especially in the north, generally rely on traditional methods of teaching English as a second/foreign language such as the grammar translation method or audio lingual method neglecting genuine opportunity provided by these modern technologies. As a consequence of many factors, when the students leave high school, students who have studied formal English teaching often remain poor to use the language communicatively (spoken or written) when they encounter authentic situations.

Nowadays, teachers of English around the world prefer some form of communicative teaching and learning rather than the traditional methods of ELT which dominate the teacher-centered approach and neglect the students' communication skills. The teacher-centered approach depends mainly on the learner's memory and does not care about the authentic use of language. Although, a successful EFL teacher is not necessarily restricted to one method or another, the ICTs have changed the pace of teaching strategies to suit the goals of his materials and the needs of his students. On the other hand, ICTs have given the students many opportunities to practice English in and out of the classroom. With the help of the modern technologies, they have time and freedom to understand, reflect, and analyze what they have been exposed to.

Moreover, the ICTs put forward an influential base for efficient education. Now, we need the modern technologies for a better blended method of delivery to create apt teaching techniques to enhance the process of learning English language. ICTs are very motivating, because they help the learners to learn the language which is carefully designed to meet the prescribed goals.

The Impacts of ICTs on ELT

Undoubtedly, motivation is the cornerstone in the process of acquiring or learning a foreign language; therefore, learners usually have a positive attitude toward computers. Even though, the modern technologies are double-edged sword, their advantages are acknowledgeable over its pitfalls. No doubt, they have significant, positive impacts on ELT, the following are some them.

A. Availability of the Materials

ICTs are very stimulating because of the availability of the learning materials whether it is computer-based, in the web or on CDs; therefore, the student can learn at his own pace with a very patient tutor (the machine). Meanwhile, the use of online telecommunications for teaching and learning via the computer in the classroom across the world will consolidate the improvement of different academic skills. The availability of images, animation, audio, and video clips they help much more in presenting and practicing new language.

B. Student Attitudes

ICTs have positive effects on student attitudes toward the language teaching and learning. Students felt more successful in school, were more motivated to learn and have increased self-confidence and self-esteem when using computer-based instruction. This was particularly true when the technology allowed learners to control their own learning.

C. Autonomy

Students have the opportunity to choose the element/s of language which they want to focus on meeting their learning strategies or learning styles. Here, the learner-centered approach is supported by these facilities offered by the ICTs while the tradition techniques approaches failed to give such opportunities. The student feels free to practice the language without fear from the others at their own phase and pace.

D. Authenticity

ICTs provide authentic learning environment, because the learner can interact with others across the continent are very motivating to the language learners. Confronting such challenging situations is the touchstone for using the language in authenticity not artificially. The ICTs as tools for learning are very motivational; however, they are very attractive and accessible.
E. Multifaceted Tools

No doubt, ICTs could successfully contribute to two ends: creating a blend of classroom materials and delivering these materials in multiple ways. They facilitate different activities such as testing, doing exercises and performing different pedagogical tasks or games.

F. Help Teachers

ICTs help the teacher to prepared, produce, store and retrieve their materials easily and swiftly. The availability of different rich texts, different topics, quizzes, exercises helps in saving the teacher’s time. Despite the opportunities and facilities offered by the modern technologies in assisting better teaching, but they do not replace it. So far, the skilled teacher is the only person who is shouldering the responsibility of delivering and achieving the teaching goals.

G. Student-centered

ICTs help the student be exposed to language clock-wise and definitely they help them to write and edit their work in order to produce a well published work. Likewise, computers encourage students to do extra work outside the classroom, play language games and, hopefully, gain extra exposure to the language and improve their progress in the language and support the student-centered concept. Via the computer and the internet, the students will be able to communicate with others in different places. Moreover, ICTs help the shy or the quiet students who sometimes abstain from asking questions or challenging information to communicate and ask questions. Using modern technologies in the learning environment has been shown to make learning more student-centered and improve the learning process by stimulating teacher/student interaction. Furthermore, ICTs enhance collaborative learning which results in higher self-esteem and student achievement. They promote critical thinking and student-student interaction.

H. ICTs in Self-Assessment

The examinations generally test the reading and writing skills of the students, totally neglecting the listening and speaking skills, which are indispensable skills for the learners in their future career. The listening capacity can be tested through computer-assisted packages like listening to a dialogue/passage and answering the questions or listening to lectures and then answering short questions or true or false statements. It will enhance their talents for taking international tests because many competitive exams follow such a pattern to test the grasping ability of the students.

Shortcomings Of ICTs

Instructors should be aware of modern technologies pitfalls if they want to adopt them in pedagogy. Feenberg (2002) and Yasek (2005) give their warning for the teachers to study carefully the integration of any newer ICTs into English language arts and literacy teaching as a given advantageous outcomes. The development of new technologies and the decision to integrate them into teaching and learning lives is neither a given conclusion nor following a prearranged route. Teachers, individually and collectively, have the capacity and the responsibility to influence the development, modification, adoption, and/or rejection of newer technologies. In order to make these critical decisions, they will need to understand not only how to use these technologies, but also the benefits and costs their adoption and integration into English language arts and literacy teaching have the potential to create for teachers, students, and the broader community.

We should not take up such serious issues childishly without thinking of the consequences. Since best practice in teaching requires that teaching must be definite to individual students, classrooms, and communities. Such decision-making will require additional research on the classroom at local as well as national levels.

If the teachers and the students haven’t got sufficient training to use the new technologies effectively, the process will be frustrating and time consuming.

The quality of programs has not yet reached the level of assessing the users’ natural spoken language or the appropriateness of use in the context of the situation.

Designing and Delivering Materials Via ICTS

Evidently, learning materials designed and delivered by modern technologies add quality and value to the teaching/learning environment. They should help develop basic thought processes such as critical thinking, analysis,
and problem solving. The skillful instructor knows how to get the maximum benefits from these technologies in
during the period or course limited life time.
New materials delivered via the Internet that help with the repetition needed for developing reading, writing, and
listening in English can reduce hard work for educators and can be entertaining for both the teacher and the learner.
Actually, modern technologies can facilitate and motivate the teaching and learning process.

Pedagogical Implications of ICTs
To obtain a better benefit from the potentials of the ICTs there should be the following:
\(\text{o} \) Every classroom should be equipped at least with a computer and a data show projector to enable the teacher to
present the new lesson effectively.
\(\text{o} \) There should be a website for the class designed deliberately for pedagogical purposes. Teachers can exploit this
site for assigning exercises, homework and in turn the students can respond to the instruction and the feedback
would be immediately via the machine.
\(\text{o} \) As the feedback is immediate, the learners can identify their strengths and weaknesses and improve on them. As
learner autonomy gets momentum, they facilitate individualizing curriculum, permitting them to dictate the pace of
learning and widen the sources of information in the required area.
\(\text{o} \) It has been widely recognized that connecting the power of ICTs for learning purposes requires that appropriate
learning strategies be developed that harmonize effectiveness in learning with the technology role. This recognition
underpins the National Grid for Learning relationship, and a general interest in fostering innovation in learning
strategies (Kearns & Papadopoulos 2000:77).
\(\text{o} \) Every student should have an email and he should use his email in sending his assignment and any enquiries to his
tutor.
\(\text{o} \) The capacity of ICTs to deliver information or to communicate with mass of students in somewhat entities let the
process of learning more suitable for the student’s need in time and place without the restrictions of the traditional
classroom situations.
\(\text{o} \) Information technology can only contribute substantially to the improvement of schooling if it is appropriately
onbedded in powerful and interactive learning environments [established within] the broader context of
[supportive] pedagogy, curriculum and school organization (DEETYA 1996:14), when it is so embedded, the
improvement could be substantial.

Conclusion
The use of ICTs in language teaching has countless benefits. The development in the use of ICT, like language lab,
videos, satellite broadcast, videoconferencing and web seminars have support the richness and quality of education
both on and off campus. The Distribution of the knowledge and learning with more flexibility supports the slogan,
"Any space is a learning space." Therefore, our schools and universities should be equipped with computers and
internet services not just tools to learn a language, but they contribute to different aspects of educational development
and effective learning. We as teachers should be aware of the challenges facing modern education in general and ELT
mainly; otherwise we will be wading in the mud of the traditional methods inefficiency if we do not exploit ICTs
more effectively and efficiently to attain our goals to adjust to the best quality.
