Acknowledgments

A thesis is never solely the work of author. Support and encouragement comes from different sources in various ways. Writing an acknowledgment is about time to put the research features aside and to offload some gratitude. It has taken me close to four years to complete which breaks down to about three and half years of research plus six months of thesis writing. This thesis marks the end of a long and eventful journey for which there are many people that I would like to acknowledge for their support along the way. It feels a bit of an awkward task to try to do this in couple of pages, since this thesis and my whole PhD work was benefited of the ample support of so many.

Above all, I offer my humble obeisance to the Almighty who provided me endurance and eventually rewarded me with the successful completion of my thesis. Words fail to express my appreciation to my Parents and Nana-Naniji; mentioning them here is just a ritual since I know that no amount of words written here can equate their unconditional love. The tremendous sacrifices that my parents made to ensure that I had an excellent education. For this and much more I’m forever in their debt.

I have been very fortunate with my supervisors: My primary supervisor and an ideal mentor Prof. S. N. Sanyal has been a significant presence in my life. His ability to probe beneath a scientific text is a true gift and his insights have strengthened the study significantly. I will always be thankful for his wisdom, knowledge and deep concern for me and for instilling in me the quest for scientific pursuit. I wish to express my warm and sincere thank to my Supervisor Prof. Bimla Nehru for her valuable advice, friendly help and important support throughout this work.

I owe my most sincere gratitude to Dr. Kim Vaiphei, Additional Professor, Department of Histopathology, PGIMER, who gave me the opportunity to work with her and introduced me in real sense to the field of histopathology. Her wide knowledge along with her understanding, encouraging and personal guidance have provided an important basis for the present thesis.
My sincere thanks and due regards to Prof. D. K. Dhawan, Ex-Chairperson and Prof. M. L. Garg, Chairperson Department of Biophysics, for their cooperation and providing me with all possible helps from the department. I thank all the other faculty members of Department of Biophysics for their help during the course of my PhD work.

I am deeply grateful to Prof. P. Reddanna of Department of Animal Science, School of Life Sciences, University of Hyderabad who gave me the opportunity to work in his lab and permitting me to perform certain experiments with the support of his students. I warmly thank all the lab members of Prof. Reddanna's group especially Dr Karanati K. Roy and Mrs Apana Rao for their kind help and friendly support during my stay in Hyderabad. My warm thanks are due to Mr Bharat Reddy and his wife for making my stay in Hyderabad the most comfortable and the memorable one during one of my visit to Hyderabad.

During this work I have collaborated with many colleagues for whom I have great regard and I wish to extend my warmest thanks to all those who have helped me with my work in the Department of Lipid Science and Traditional Foods, CFTRI, Mysore for GLC of lipids; SAIF at AIIMS for transmission electron microscopy work; Dr Ashok K. Chakraborty, Head, Department of Medicinal Chemistry, NIPER for FT-IR; Dr Shekhar Majumdar at IMTECH for his help in fluorescence microscopy work.

I would like to thank the office and technical staff members of Department of Biophysics especially Shamlal ji, Pritam ji and Verma ji for supporting me in carrying out my lab experiments and administrative work. Thanks are also due to Mr Navtej Singh (CIL, Panjab University) for actively assisting me in photomicrography work.

I gratefully acknowledge the UGC and ICMR for their financial assistance to carry out my PhD work in the form of Project fellowship and Senior Research Fellowship respectively.
It was a magnificent time in the lab particularly during the transition phase from starting my research career as a ‘Single Research Scholar’ to so called ‘Prof. Sanyal’s Research Group (Sanyal et al). My special thanks goes to Neha for her much needed support and constant untiring, selfless and unconditional help (even at odd hours) to tackle out all my problems in the lab. I usually heard of ‘just a call away friend...’ and you proved it Neha.

Important input for my thesis work came from my colleagues Pinky and Jasmeet who have always helped me in my lab experiments. I am deeply indebted for their friendly help and support whenever needed. I sincerely appreciate lighter moments shared with Ravi and Punita during the past years.

I thank all my colleagues especially Praveen, Nancy, Manpreet and Poonam for all those light and cheerful moments that I shared with them during their M. Sc. days. Their friendship was refreshing and applauding that has enhanced the PhD experience. Nancy here deserves a special mention who has always added an extra zing to lab atmosphere.

I extend my heartiest thanks to my other colleagues Pavitra and Sumiti for their concern at the various occasion of my PhD work. My heartiest thanks to Jayant (UIPS) and Maninder (Department of Hematology, PGIMER) for their help and understanding during course of this study.

Furthermore, I warmly thank my classmates: Aarti for her valuable timely advice and friendly support, and Mandeep for being a special friend.

There are several people that I like to mention because of the special place in my life. I have always enjoyed a great support, love and care from my special friends Vivek, Deepak, Amarjot, Vibhor, Rajinder, Paras and Harinderbir. Their friendship has been invariably a booster for me and I feel fortunate to have a strong bond of friendship with them without which life would be bleak.
I thank my eldest sister Dr. Meenakshi K. Chauhan for their love and encouragement. My heartiest love to the two little stars Arshia and Praveer, for their sweet lively smile and their innocent mistakes that wiped off worries many a time. I thank both Yash Jiju and Ajay Jiju for their elderly concerns. Further, my funky brothers Brijesh and Atul and sweet sister Ashita deserve a special mention for being an important part of my life.

I am falling short of words for my deepest sense of appreciation for my Parent-in-laws for extending unconditional love and faith in me. I'm truly thankful to God for being blessed with such a wonderful Parent-in-Laws. My sweet sentiments and admiration to my Sister-in-Law Pooja and brother-in-law Amitesh whose regards and love are unmatched.

Words are too frail for me to adequately register my inward emotions and admiration towards my loving wife Jyoti for all of her dedication, love and persistent confidence in me. The togetherness has been a huge learning experience and a progressive trust for rest of the life.

Last but not the least I would like to mention my source of inspiration in the field of scientific research, my lovely sister Dr. Seema K. Rathore. Her existence in my life has always helped me in inculcating the different elements required for enduring the PhD life. Without any exaggeration, the present vocabulary looks like a tiny one to weave her mettle. But still I'm profusely thankful for her relentless support to me and her 'don't quit spirit'.

With deepest sense of regards and gratitude I dedicate this thesis to the two most important persons of my world:

My Mentor - Prof. S. N. Sanyal for lending a confidence in my capabilities and giving me all the freedom to explore beyond the confines;

My Dear Sister - Dr. Seema K. Rathore for being a great and constant source of inspiration.

Thanks!

(Shailender Singh Kanwar)
