Abstract v

1. Introduction 1
1.1 Historical Background 1
1.1.1 Carbon as Graphite and Diamond 2
1.1.2 Fullerenes- Early History 3
1.1.2.1 Structure of fullerenes 4
1.1.3 Carbon nanotubes - their synthesis 7
1.1.3.1 Structure 11
1.1.3.2 Various Types of Carbon Nanotubes 12
1.1.3.3 Nanotube Ropes 13
1.1.3.4 MWNT Materials 15
1.1.3.5 General Properties of Carbon Nanotubes 15
1.2 Broad outline of the thesis 18

2. Interatomic Model Potentials for Carbon Nanotube Crystals 22
2.1 Introduction 22
2.2 Model Potential for rigid carbon nanotubes (Inter - tube Potential) 23
2.2.1 Discrete Atom Model 25
2.2.2 Continuum Tube Model 25
2.3 Model Potential for flexible carbon nanotubes (Intra - tube Potential) 34
2.3.1 Approximate Form of Brenner Tersoff Potential 37
2.3.2 Bending Energy of a SWNT 45
2.4 Discussions and Conclusions 47

3. Stable Structures of Bunches and Multiwall Nanotubes 48
3.1 Introduction 48
3.2 Structure of Carbon Nanotube Bundles 49
3.2.1 SWNT Bunches 49
3.2.1.1 Cohesive Energy 50
3.2.2 MWNT Materials 54
3.3 Discussions and Conclusions 55

4. Elastic Moduli and Pressure Driven Phase Transformations 56
4.1 Introduction 56
4.2 SWNT (isolated) 65
4.2.1 Procedure for relaxing the tube 65
4.2.2 Effect of the pressure applied axially on the tube 65
